Sample Character: Qwyn	16-21

Sphinx

The Dice

A standard polyhedral dice set comes with seven dice. We will use up to five of them.

Dice Steps

The dice form a stepwise power increase.

We sometimes count **Die Steps** (▣).

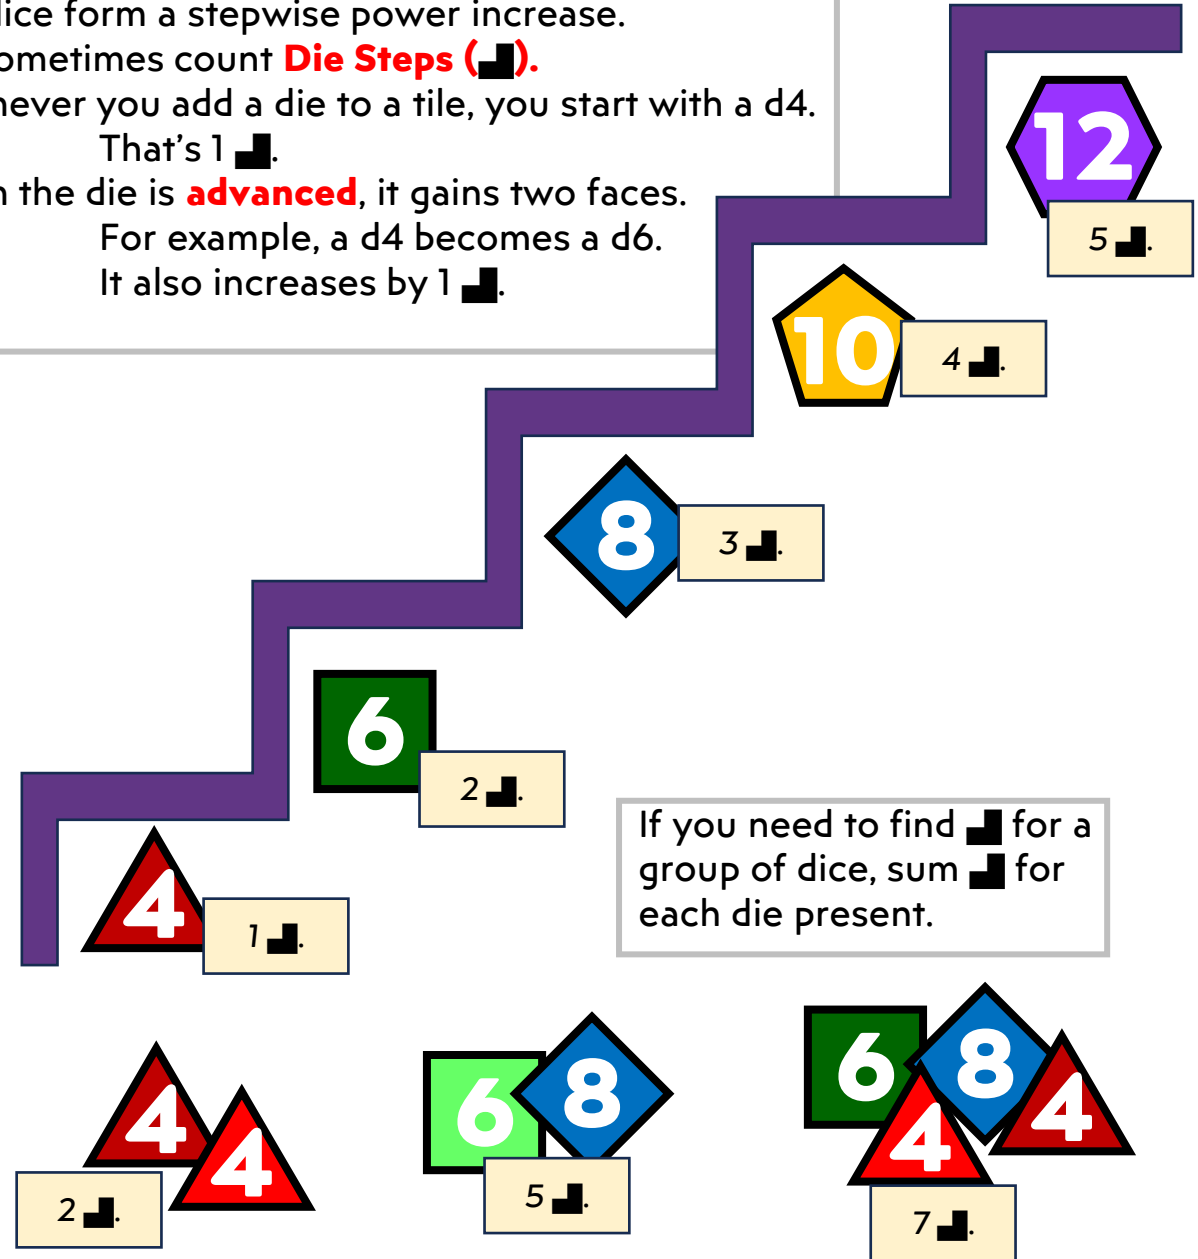

Whenever you add a die to a tile, you start with a d4.

That's 1 ▣.

When the die is **advanced**, it gains two faces.

For example, a d4 becomes a d6.

It also increases by 1 ▣.

Character—Part 1: Stats

BODY is a measure of toughness, size, and build.

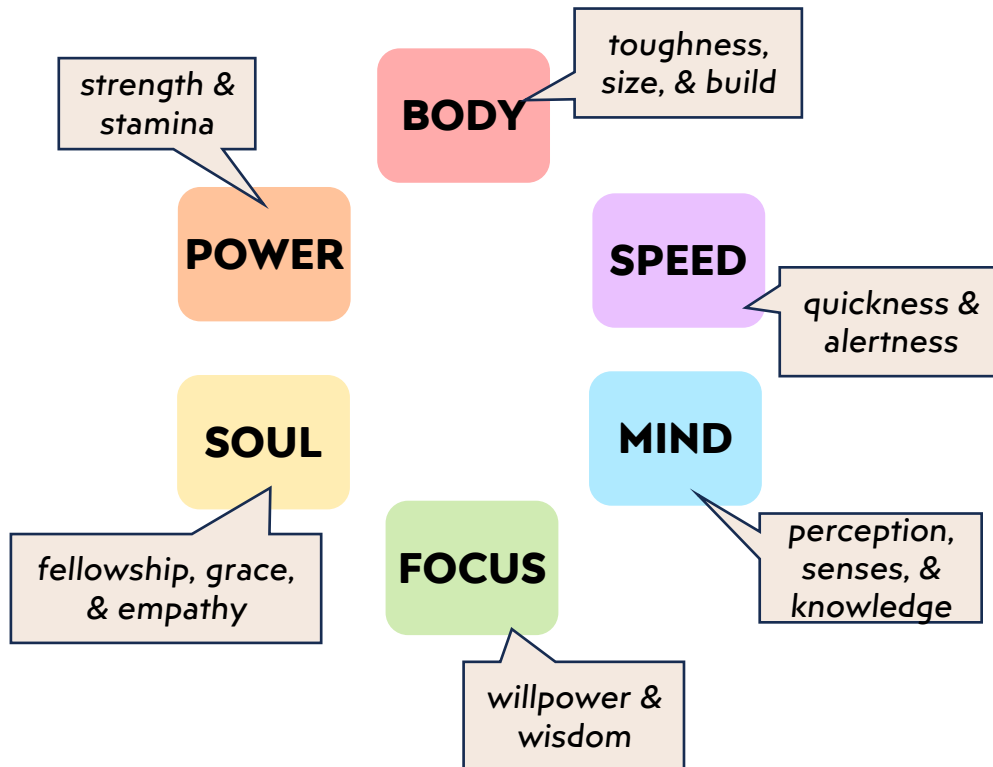

POWER is a measure of strength and stamina.

SOUL is a measure of fellowship and empathy.

FOCUS is a measure of drive and concentration.

MIND is a measure of perception and knowledge.

SPEED is a measure of quickness and alertness.

Interview with a Hero (#1)

Pick six of these.

Of the six you pick, double two of them.

Then score the colors for the number of times chosen.

Are you durable and driven?	(Red, Green)
Are you interested in mastering weapons?	(Orange, Purple)
Do you want to shoot from a distance?	(Green, Purple)
Do you want to move fast or hide in shadows?	(Purple, Red)
Do you favor reason or information gathering?	(Green, Blue)
Do you like fixing things and building stuff?	(Red, Blue)
Are you friendly, helpful, or compassionate?	(Yellow, Green)
Are you a trickster and a thief?	(Purple, Yellow)
Are you constantly alert and wary of danger?	(Blue, Orange)
Do you have an aggressive personality?	(Orange, Yellow)
Do you try to heal or teach others?	(Yellow, Blue)
Are you athletic and strong?	(Red, Orange)

Your character starts with a **d3** in each stat and **25 XP** to advance stats.

3

To advance a stat, pay **1 XP** to increase the die one **step** (▬). It is now a d4.

1 ▬

2 ▬

Additional steps cost more XP (shown in the **green Xs**). These either promote a die (raise its step) or add an additional d4.

System Concept—Dice

In *1KW*, you will build dice pools before you roll and often select the highest among them for your best result. However, some functions require extra dice to get a good result and/or sustain your resources. Advancing stats and tiles requires finding a balance between **high dice** and **more dice**.

The cascade continues past 4 ▬ and the bottom of this chart. Each advance of dice on a stat or tile costs XP equal to {**steps on the advanced die**} plus {**count of other dice**}.

3 ▬

You'll use this scheme on **tiles** later. For starting characters, tiles can't go higher than this row.

Higher dice can be gained during play.

4 ▬

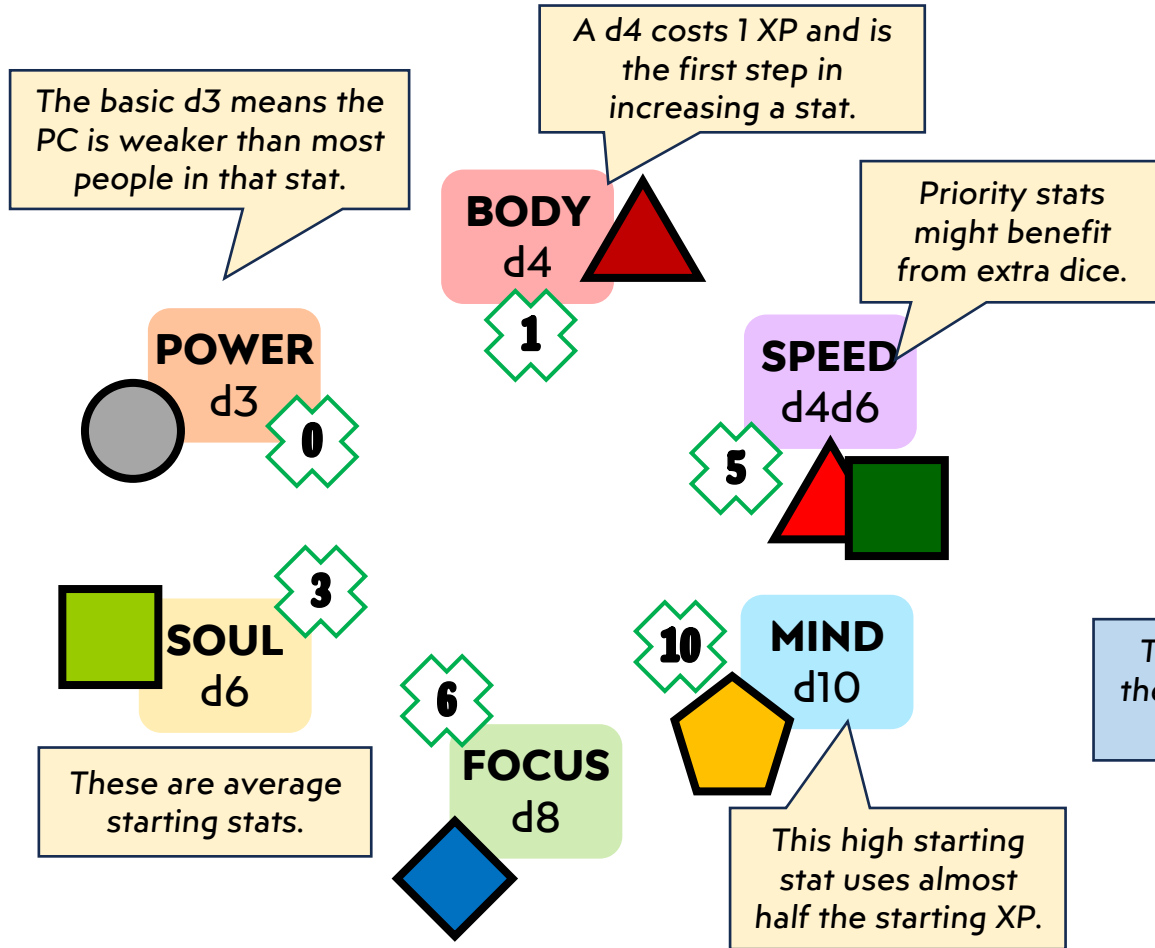

5 ▬

6 ▬

7 ▬

Example of New Character Stats

Manual Convention

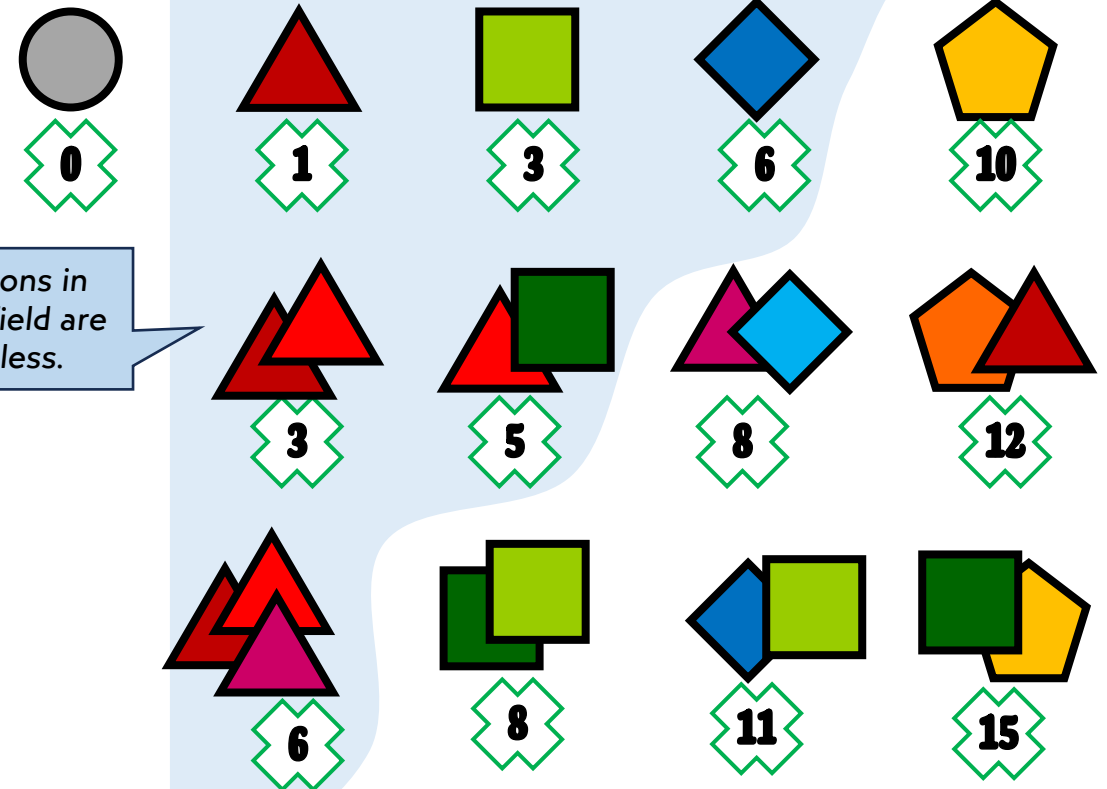

Green Xs with additions are the XP needed to gain a specific advance. Total them to get the full XP cost.

White Xs with numbers are the full XP cost for the arrangement of dice and other features on a stat or tile. It is important to keep a record of how much XP has been spent on each tile, especially gear tiles.

Common Dice Combos and XP Costs

Tiles: The Basics

Each tile has a **keyword or phrase**. When you apply a tile, use this term as a guide to explaining why it's appropriate.

Tags come in several types. They customize your tiles.

Keep track of your **XP** spent on each tile.

expertise

Tags:

1 d4

Most tiles get **dice**, using the same system as stats.

Each tile has **two colors** (from the stat rainbow), which fill these boxes.

For quick-reference, record **die steps** here. Starting characters cannot have more than 3 steps per tile.

Tags:

1 d4

Character—Part 2: Tiles

The character also builds a set of **tiles** to form their **mosaic**.

Trait tiles describes the hero's appearance, behavior, or demeanor.

Story tiles relate a feature of the hero's race, past, or occupation.

Skill tiles come from the basic skills list (next page), the auxiliary skills from the archetype lists, or can be made up by the player.

Gear tiles are weapons, tools, spells, tricks, and clothing.

Each tile costs 1XP and begins with a **descriptive term or phrase**, **two colors** representing stats from the rosette, and a **d4**.

Tiles are advanced using the same dynamic used for stats. They may not start with more than 3 on any one tile.

Characters begin with 50 XP to build tiles.

Starting characters should aim for **15 tiles**.

More grants endurance but sacrifices power.
Fewer grants showy success but quick exhaustion.

It isn't necessary to have all the tiles built to start play. You can save XP and add tiles as you flesh out your character. Interviews on the following pages will help with each type.

Character—Part 2: Skills

Each tile uses two of the six stat colors (red orange yellow green blue purple).

Basic Skills

Athletics	green red	endurance, short-range weapons
Craft	blue green	scholarly creativity or profession
Duel	red orange	use of manual weapons in combat
Evade	purple yellow	acrobatics, dodge, streetwise
Firearms	green purple	use of long-range weapons in combat
Guile	green orange	trickery, traps, insight, savvy
Heal	yellow green	medical skills, empathy
Menace	orange yellow	intimidation, confidence, manipulation
Knuckles	orange purple	bare-handed martial arts
Lore	yellow blue	general and regional knowledge
Presence	blue orange	charm, wisdom, appearance, and etiquette
Reason	purple blue	perception, analysis, investigation
Stealth	purple red	sneaking, skullduggery, hiding
Tinker	red blue	repair and operation of tools and vehicles
Wiles	yellow red	willpower, negotiation, barter & haggle

Skill color is fixed for these basic abilities.

Not finding the skill you're looking for?
Try **Exotic skills** (later in the manual),
or discuss with the GM to invent one.

Interview with a Hero (#2)

Ask your character to offer these insights.
Five skill tiles is enough to get started, but you can pick more.

Are you chasing excellence in martial skill? Pick **Duel, Knuckles,** or **Firearms**

Do you prize knowledge and precision? Pick **Lore, Reason,** or **Tinker**

Are you charismatic and attractive? Pick **Presence, Athletics,** or **Wiles**

Do people think of you as a scoundrel? Pick **Stealth, Guile,** or **Firearms**

Are you a craftsman or professional? Pick **Craft, Tinker,** or **Heal**

Do you try to peek inside people's minds? Pick **Wiles, Guile,** or **Menace**

Do you like building bridges and mending fences? Pick **Lore, Presence,** or **Craft**

Are you always in motion? Pick **Athletics, Evade,** or **Stealth**

Do you investigate despite the danger? Pick **Reason, Knuckles,** or **Menace**

Do you risk yourself to defend others? Pick **Duel, Evade,** or **Heal**

duel

Duplicating little tiles
can have big benefits.
Take two, they're small.

Character—Part 3: Traits

Each tile uses two of the six stat colors (■ ■ ■ ■ ■ ■).

The GM will set one and recommend others,
but you get to pick the other.

The keyword is important here.

These keywords should define an aspect of the character.

It might be visual obvious, like size or shape,
or it might be intrinsic, like smarts or compassionate.

Interview with a Hero (#3)

Ask your character these questions. Pick a keyword to put on a trait tile or make up a better term. Two to four trait tiles is recommended, but you can use more. The color of the term suggests one of the two colors for the tile.

What shape are you? Keywords **Huge**, **Willowy**, **Slab of Muscle**, **Childlike**, **Wingspan**, **Balanced**

What do people see when you move? Keywords **Spry**, **Jumpy**, **Never Walks**, **Rooted**, **Slippery**, **Bulldozer**

Describe your thinking processes. Keywords **Intuitive**, **Quick Study**, **Best Cover**, **Eidetic Memory**, **Make It Fit**, **Can I Help?**

How do you act around other people? Keywords **Sherlock**, **Introvert**, **Life of the Party**, **Frightening**, **Bouncer**, **Performer**

How do you engage in conversation? Keywords **Braggart**, **Passionate**, **Wheel & Deal**, **Sports Fan**, **1000 Anecdotes**, **Hilarious**

What impression do you leave behind? Keywords **Pious**, **Persuasive**, **Clever**, **Thrillseeker**, **Forgotten**, **Survivor**.

What is your most obvious outstanding feature? Keywords **No Shirt**, **Battle Scars**, **Talks Jargon**, **Predatory Stare**, **Kind**, **Nervous Energy**

Character—Part 4: Resource Pools

Each tile gained also improves **Resource Pools**:

Health: 1 point for each **red** tile + 1 point for each **orange** tile.
This pool records vitality.
It is often reduced during combat.

Energy: 1 point for each **green** tile + 1 point for each **yellow** tile.
This pool represents drive and willpower
as much as it covers stamina.
It can be spent to add an extra die to a pool.

Reflex: 1 point for each **purple** tile + 1 point for each **blue** tile.
This pool represents quickness in **movement**
as well as their sharpness of perception.
It can be spent for **Initiative**.

Note: Each tile counts twice.

A tile may add 2 points to the same pool.
e.g., a yellow and green tile adds 2 points to Energy.

Pools are adjusted whenever new tiles are gained.
Tiles can be lost temporarily (rarely permanently).
If a tile is **buried**, its contributions to pools are lost.
More about this condition later.

Character—Part 5: Backstory

Each tile uses two of the six stat colors (■ ■ ■ ■ ■ ■).
The GM can suggest colors, but the choice is yours.

The keyword is important here.

These keywords should define the character's history.

A tile could feature general nature of upbringing,
choices about their experience or career,
or it might reveal a specific incident.

Don't forget to add these tiles to your resource pools!

Interview with a Hero (#4)

Ask your character these questions. Pick a keyword to put on a story tile or make up a better term or question. Two to four story tiles is recommended, but you can use more.

Where were you born? Keywords **Farm Country, Townhouse Row, Lost Colony, The Icy Crag, Mythandruin, Spaceborn, Lavalake Island**

How did you spend your childhood? Keywords **Traveling Caravan, Urban Sprawl, Amid Glass Towers, Six Siblings, The Cloisters, Raised by Tigers**

Describe a key event in your youth. Keywords **The Pandemic, Rite of Passage, Fled the Volcano, Aliens Arrived, State Champions, Prom Night**

Who inspired or mentored you? Keywords **Favorite Teacher, Pebbles the Cat, Sister Bethesda, TV Astronomer, Old Desert Hermit, Mom**

How were you educated? Keywords **Vault of Books, Media Junkie, Net Upload, Ancestral Memories, Buried in Homework, Socratic Lectures**

What was your first work experience? Keywords **Waitress, Apprentice, Acolyte, Squire, Courier, Powder Monkey, Scout, Street Punk**

Describe your career path. Keywords **Astronaut, Mystic, Journalist, Paleontologist, Surgeon, Gumshoe, Sorcerer, Kickboxer**

What is your biggest turning point? Keywords **Prophecy, Lost My Family, Fired!, Escaped the Altar, Medal of Valor, Discovered, My Nemesis**

System Concept—Tags

Tiles can also be tailored by adding **Tags**.

Most cost 2 to 4 XP to add to a tile.

A tile can have up to 1 tag per ,

although there are a few exceptions.

Build Tags—these add to Skill, Trait, or Story tiles and reflect elements of the character's composition. They usually modify pools or specific dice checks.

Detail Tags—these add to Gear tiles and reflect elements of equipment composition. Some Build tags also appear in the Detail tag list. These tags apply only when the tool is used.

Range and Duration Tags—these add to Gear tiles and shape the scope of effects done by tools. These tags do not count against the  limit.

Crit Tags—these add to Gear tiles and modify the kind of impact gets inflicted by the tool. Most of them improve the injury dealt to the target.

Shield Tags—these add to Gear tiles and modify the kind of protection the tool provides its user. Most of them deflect injury dealt to the user.

For 2 XP, the **Tough** tag adds  to the character's Health pool. This tile currently adds 4 HP!

Tags—Build Tags

Build tags can be put on Skill, Story, or Trait tiles for 2 XP. As Detail tags, they are limited to the type of Gear listed.

Resource Pools	improves	how it works
Quick	reflexes, soft armor	+ RF
Tough	health, armor	+ HP
Vital	energy, open armor	+ EN
Utility	improves	how it works
Expert	skill, tool	+ to action check
Nimble	skill, open	+ to Walk
Attack	improves	how it works
Keen	aggression, melee	+ to attack
Piercing	damage, ranged	- to foe's soak
Sharp	aggression, weapon	+ to damage
Defenses	improves	how it works
Agile	dodge, open	+ evasion
Hidden	concealment, soft	+ vs detection
Ironclad	resilience, hard	+ soak
Rugged	resistance, closed	+ grit

Tags are **REFINEMENT**. Don't worry if you can't afford many during character start.

Character—Part 6: Gear

Each Gear tile uses two of the six stat colors (red, orange, yellow, green, blue, purple). Improving weapons, armor, and tools (including spells) uses tags and can get both expensive and complicated.

See pages 48-50 for advanced equipment tiles.

All Gear can start with simple, low-cost tiles and grow into more potent versions as characters learn how to use them.

Armor uses Detail and Shield Tags.

Soft: fabrics, leather, ring mail, plastic, energy field

Hard: scales, plates, ceramic, metal

Open: Half the body covered or less.

Closed: Encasement, including head.

Weapons use Detail and Crit Tags.

Melee: tools that don't leave the hand during use.

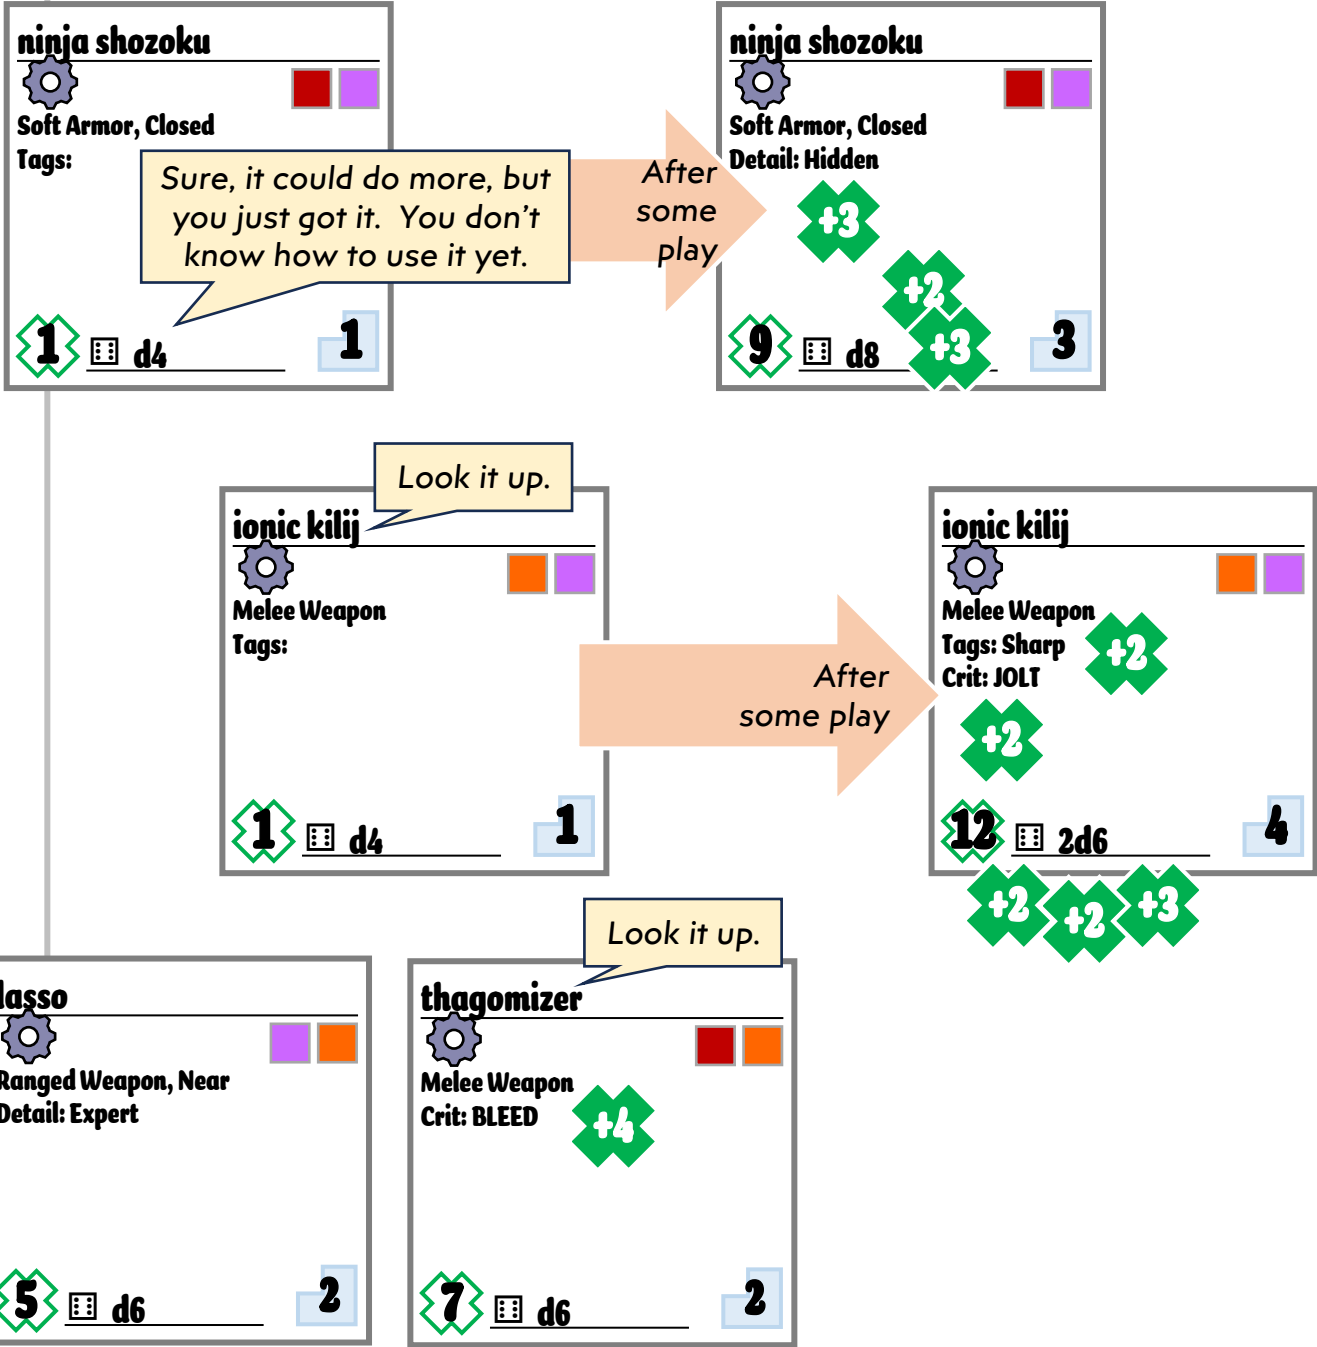

Ranged: tools launched toward foes at distance.

Near: weapons start with Reach Range.

Far: weapons start with Short Range (costs 2 more).

Tools can have Detail Tags.

Open description.

Qwyn (page 1)

It helps to have a working idea who and what you want to play.

Concept: Qwyn is a catfolk ruffian on the mean streets of Mythandruin. She works as a courier and other odd jobs, but mostly she's just trying to navigate her way between dangerous syndicates while protecting the people she cares about.

Interview with a Hero (#1)

Do you want to shoot from a distance?	(Green, Purple)
Do you want to move fast or hide in shadows?	(Purple, Red)x2

Are you a trickster and a thief?	(Purple, Yellow)
Are you constantly alert and wary of danger?	(Blue, Orange)

2

1

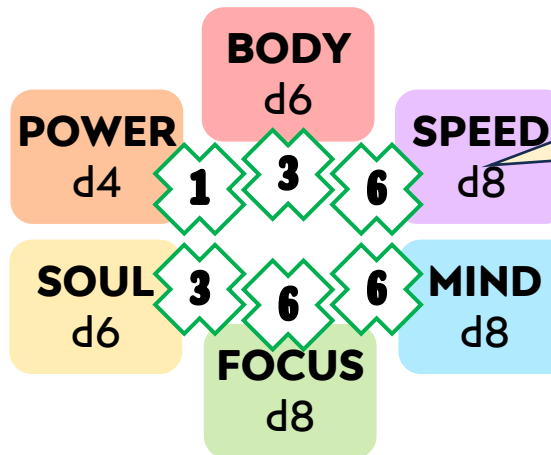

2

4

3

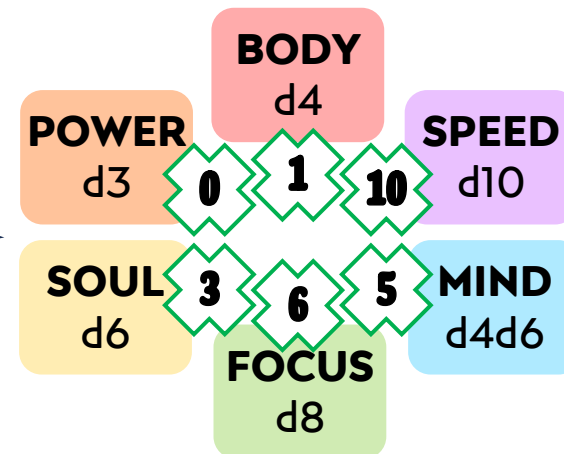

4

The first step of the Interview produces this emphasis for Qwyn's stats. This is meant as a guide only, revealing which stats merit the bulk of my starting 25 XP. It's no surprise that a catfolk is speedy, but she also needs Focus. She can play down her Power. I'll try more than one stat rosette.

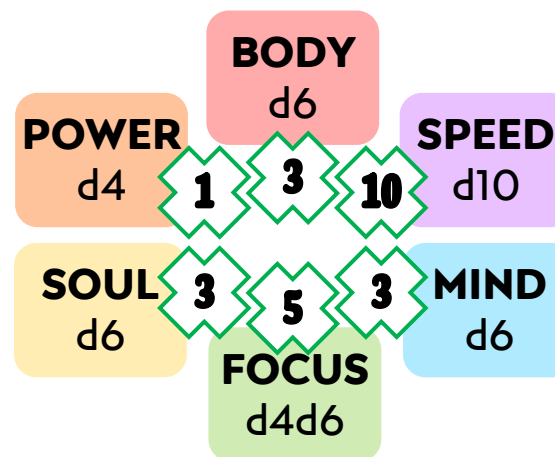

This rosette works but I think it seems a little humdrum. A catfolk should be glitzy.

This one seems too weak on the physical side of the rosette. I don't want a d3.

This one doesn't quite match the rubric's results, but its close enough.

Qwyn (page 2)

Flaw Tags—Weapon Condition

Some Gear might not be in pristine condition.
Extract 2 XP with these Detail tags by giving it a weakness.

Flaw	subtracts from	how it works
Old	armor resistance	-3 grit
Primitive	weapon impact	-3 damage
Rare	repairs	double each Break
Risky	safety	take 1 HP / rolled 1
Worn	weapon reliability	-3 attack

The Hitch Flaw

Backstory and traits can sometimes work against the character.
Story and Trait tiles can have the **Hitch** Build tag.

The Hitch tag gives XP up to 6 XP when bought,
or up to 6 XP can be split between tiles with Hitches.
Hitched tiles do not have to be the tiles the XP is spent on.

Calling a Hitched tile costs 1 Energy,
but that's not its most negative aspect.
The GM can force the Hitch tile to be called.
The higher the XP on the Hitch, the more likely it will be.

Hitched tiles cannot be burned,
and the Hitch requires a Story Point to buy off.

eighteen claws

Melee Weapon

Qwyn's gear is already meager. Her claws aren't suitable, and a worn-out pistol would be worthless.

3

d6

2

Confession time: Note that part of Qwyn's Gear tiles have always been covered up. They'll get revealed in the Equipment section. For now, we'll keep it simple.

To buy off the Hitch flaw, Qwyn will need 3 XP and a Story Point. Before then, it will cause her some trouble.

Macavity

The Call

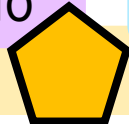

A **call** is the simplest form of an action check.
The character attempts something that requires skill.
The GM will ask for a check on **two colors**.

The character assembles a **dice pool** from three sources.
Each stat of matching color contributes its dice
and the character may **call a tile** for its dice.
The called tile must match at least one of the colors.

“Qwyn wants to
sneak through the
ally,” the player says.

“That’s a **Blue / Purple**
check,” says the GM.

Epic	20
Legendary	24+

Haywire

In any pool where **more than half of the dice** roll 1s,
the action goes **haywire**—a problem arises.
This setback may not derail the action
but it usually adds new obstacles to the situation.

Test Modifiers

Once per test, you may spend **Energy** to gain a **Freebie die**. The freebie must duplicate a die already in your pool.

It costs Energy equal to its , e.g., a d6 costs 2 Energy, a d8 costs 3 Energy, etc.

Qwyn is hitting the books trying to translate some symbols she found. The GM makes it a Blue/Green check.

You can burn tiles after rolling on a call, but not after burning other tiles.

roll
the pool

"She got a 17," the player says.

+

+

Tiles can be burned after rolling on a Call, but not after rolling a Burn. i.e., you can't Burn twice on an action.

Each **burned** tile is out of play until the character rests.

A burned tile is out of play until the character recovers. It can't be called, even by a Chain. This does not mean Qwyn stops being a catfolk, of course; she's just a **tired** catfolk.

catfolk

Tags:

3 d6

2

Some of these mechanics can combine for truly legendary performances. Qwyn could have burned her Evade tile for another d4 and a fourth add. She could burn more as long as they're purple.

evade

Tags:

+

Four Energy could have copied her d10.

Be wary! Doing this wears the character down fast.

Attacking

A slightly enhanced mechanic is needed for checks that produce an **effect**, like injury. Not only do we need to know whether the action succeeds, the result needs to include an intensity.

The attack starts like any other action.

During a street brawl, Qwyn cuffs a thug with her fist full of sharp claws. The GM makes it a Purple / Orange check.

5

"She got a 14,"
the player says.

The distinction comes in with that spare die.
It measures the **impact** of the player's attack.

The player has choices here on how to organize dice.
The highest numbers do not have to go to the action.

The Add can be used anywhere.
If the target might be hit with one die,
save the Add for the impact.

If all dice are spent on attack, it lands but with 0 impact.
That could still be enough to deal Crits.

impact

3

"She does 3 HP
damage," the
player says.

5

Defending

The defense check uses the same process as an attack.

Evasion wins if the check **beats the attacking total**.

The **attack misses**.

Lower evasion means the character gets hit.

In defense checks, the extra die is used for **Grit**.
Grit defines how much Health a character can lose before Crits are applied by the attack.

Gashed by Qwyn's claws, the brute draws a snub-nose pistol on her and starts blasting away at her. What cheek!

4

"She got a 10,"
the player says.

As with the attack, the player can choose dice deployment.
The Add can be used anywhere.

It might be better to take the bruises (HP)
but resist taking more serious injury (Crits).

If all dice are spent on the evasion, Grit is 0.
If it isn't enough, Crits will be unresisted.

This could work well for a **tank** defense.
The defender allows the hits to land, but piles on Grit.
That will involve different stats.

Tank defenses are best if coupled with **Soak**,
which reduces incoming HP damage 1:1
before considering Grit.

"She has 3 Grit,"
the player adds.

Equipment

Gear tiles have several components.

Detail tags express the gear's function, durability, and benefits. These include some **Flaw** tags, which can reduce cost and model unfamiliarity with new tools.

Weapon categories are **Melee** or Ranged weapons, and weapon power separates **Near** and **Far** ranges.

Weapons list **Crit** tags to define the special injury they inflict.

Some tools (especially spells) also need to describe **Duration**, how long the tool's effect lasts.

Armor categories are based on material and coverage. **Soft** armors are flexible; **Hard** armors are rigid. **Open** armors cover a fraction of the body, where **Full** and **Closed** cover progressively more.

Armor bears **Shield** tags, listing the Crit tags it soaks.

The following pages show how to build weapons and armor for starting characters.

 **Near Ranged Weapon** 
Range: Short
Detail: Reload Risky Sweep 
 
  2d4 

Short Range and Sweep each cost 2 XP but Reload and Risky each rebate 2 XP, so this weapon costs 0 XP before adding dice. Its spare die can be assigned to keep it from running out of ammunition, and it sometimes bites the user with stray ricochets.

System Concept—Ranges

Linear Range

Uses a 120° forward arc,
or a third of a circle.

Touch, Close, and Reach are Melee Range.

Short to Extreme are for Ranged Combat.

Visual is for sightlines.

Earshot is for audible effects.

These will be situational.

Area and Volume

Explosive effects fill space.

The **Zone** enlarges the arc to a circular area.

A Bang fills the Close-range circle.

A Boom fills the Reach-range circle.

By itself, a Zone centers on the user.

A **Dome** enlarges the arc into a hemispheric volume.

Range to Target

Complex ranges can combine for thrown bursts.

e.g., grenades are Medium / Bang.

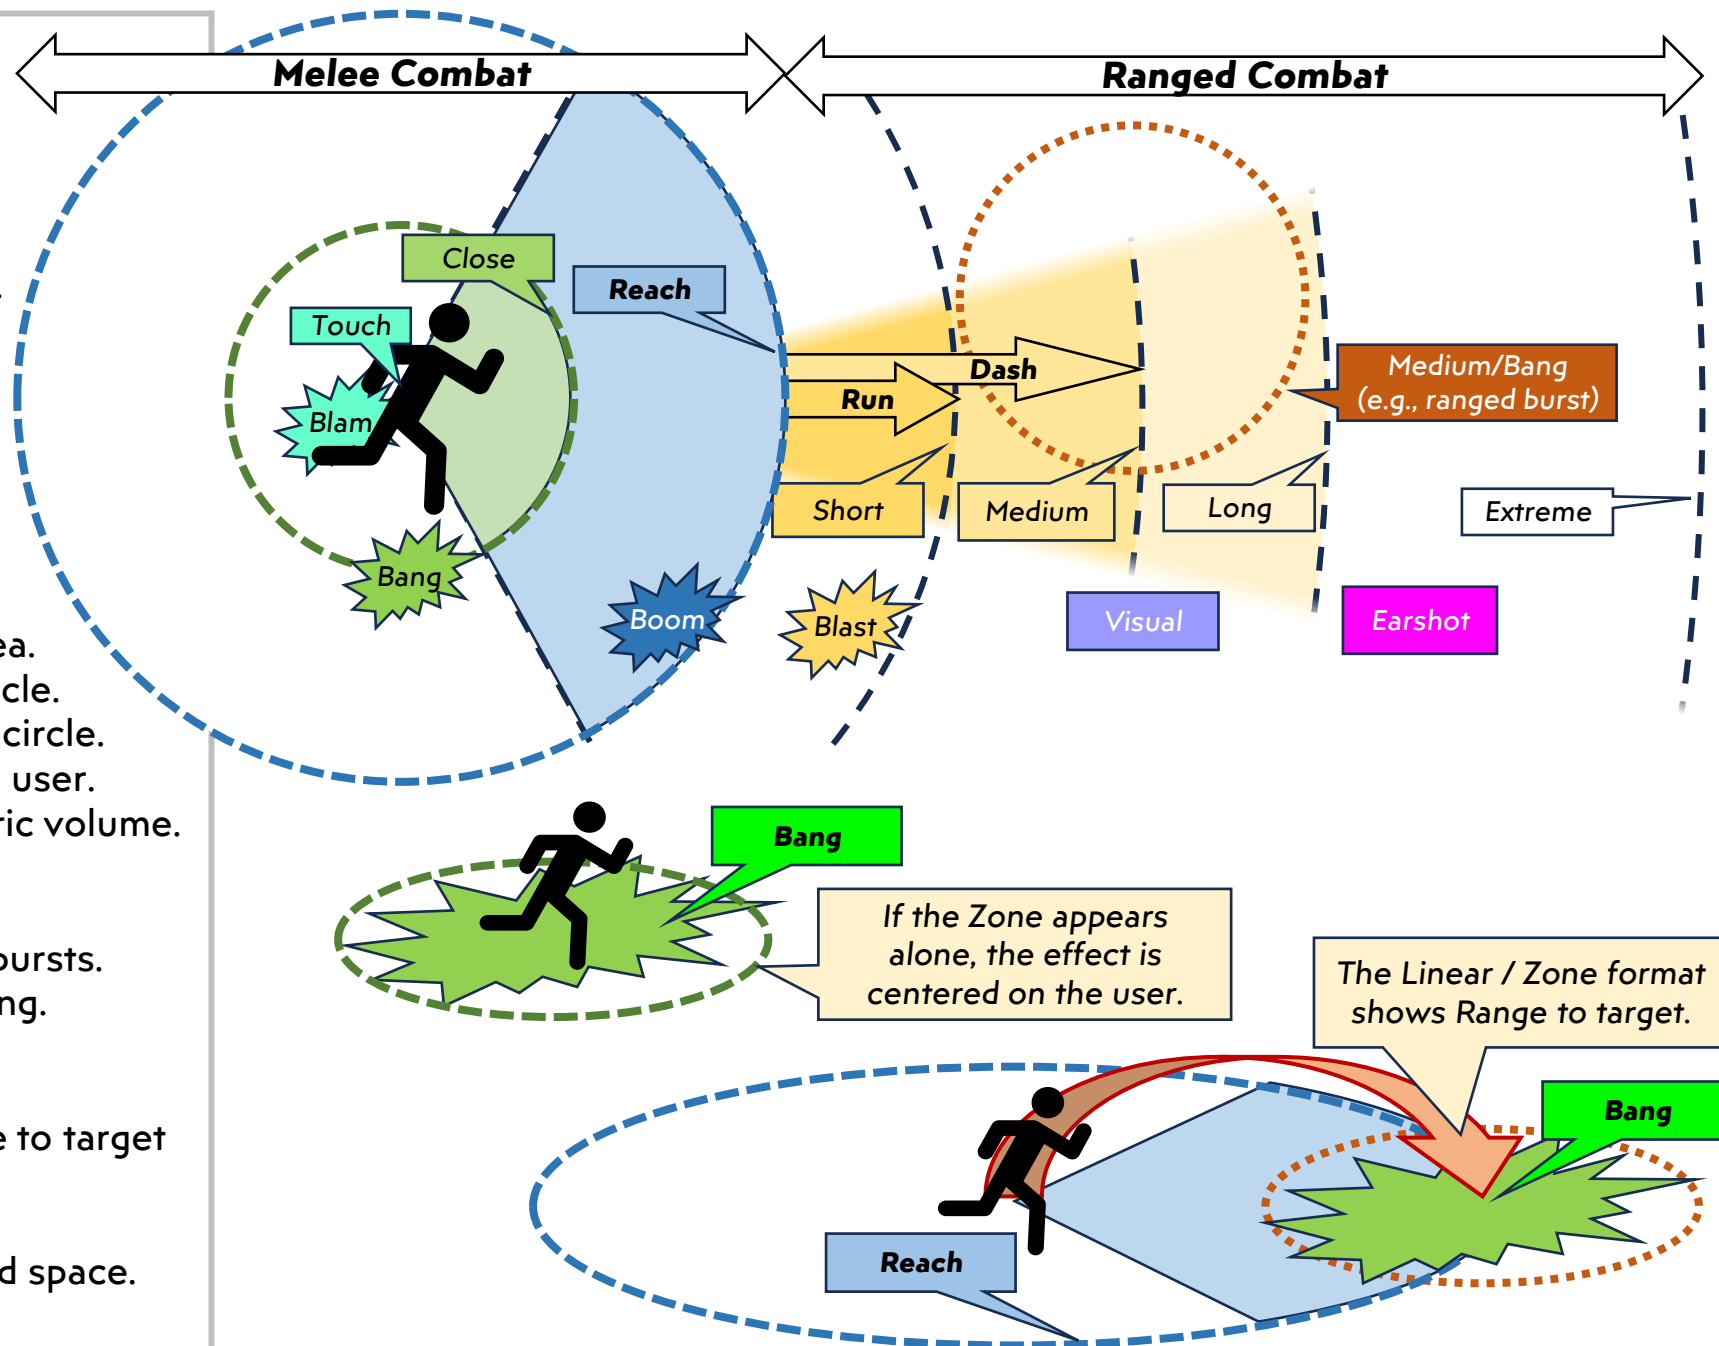

Many spells use this mechanic.

The Linear Range is listed first

and sets the maximum distance to target
within the forward arc.

The Area or Volume is listed second

and sets the size of the affected space.

Improvement

Gaining XP

Play gains the character **experience points** (XP).

XP are stored until used.

At rest points in the story, players may spend XP.

They can buy **new tiles**.

Remember to update resource pools!

They can **improve existing tiles** by

improving dice,
adding Detail, Build tags,
improving Range or Duration tags,
adding Crit or Shield tags,
or removing Flaw tags.

Note that a tile can only have **1 tag per** .

Flaw, Range, or Duration tags don't count.

Costs for tile improvement are the same as for creating them.

Duplication

Each **duplicate tag** costs 2 XP more than the previous copy.

Copying a tile is the same cost as the original.

Story Point

Stats advance just like tiles, but with one tiny exception.

The PC must do something *important*. *Meaningful*. *Epic*.

The GM awards a Story Point after a significant event.

Raising the stat costs both XP and a Story Point.

 d6

I Dropped My Awesome 23 XP Thingamajig Down a Hole

If your gear is lost or destroyed, its tile is **Buried**.

It cannot return to your mosaic while buried.

All Tags on a Buried tile are out of play.

e.g., **Tough** on that tile does NOT provide HP.

The tile and its XP are not lost.

If the item is replaced, even by something close,
the tile returns to play.

Combat Turns and the Initiative

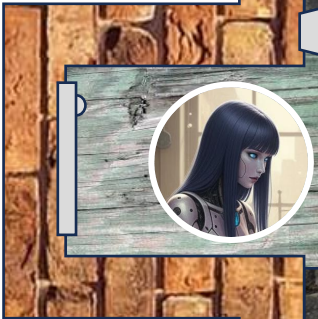

Brawls slow time to see who does what to whom. Time is cut up into turns of roughly 10 seconds. Each participant acts whenever they **gain the initiative**.

The instigator is the first to gain the initiative. After acting, the instigator **passes initiative** to another participant. The initiative can be given to an ally, a member of the opposing faction(s), or the **stage** (i.e., the surroundings). Foes and the setting are under the GM's control. Initiative is passed around until everyone has had their turn. The last actor's handoff starts the next turn.

If a character's check goes **haywire** (more than half the dice roll 1s) that character cannot pass initiative to an ally.

Qwyn, Violet, and Amonkenet are ambushed by five gargoyles in a Mythandruin alley warehouse.

Qwyn	Gargoyle A
Violet	Gargoyle B
Amonkenet	Gargoyle C
	Gargoyle D
	Gargoyle E
Stage	

Gargoyle C launches an attack on Qwyn but misses. It passes to Gargoyle E.

Gargoyle E attacks Amonkenet and hits but does weak damage. It passes the initiative to Gargoyle D.

Gargoyle D's attack goes haywire. It cannot pass to another Gargoyle. It can pass to the Setting or to one of the heroes.

Combat

What Can I Do On My Initiative?

A PC's turn includes three possible components.

Action—an initiated event using a dice pool.
Often, this will be an **attack check**.

Move—covering ground.

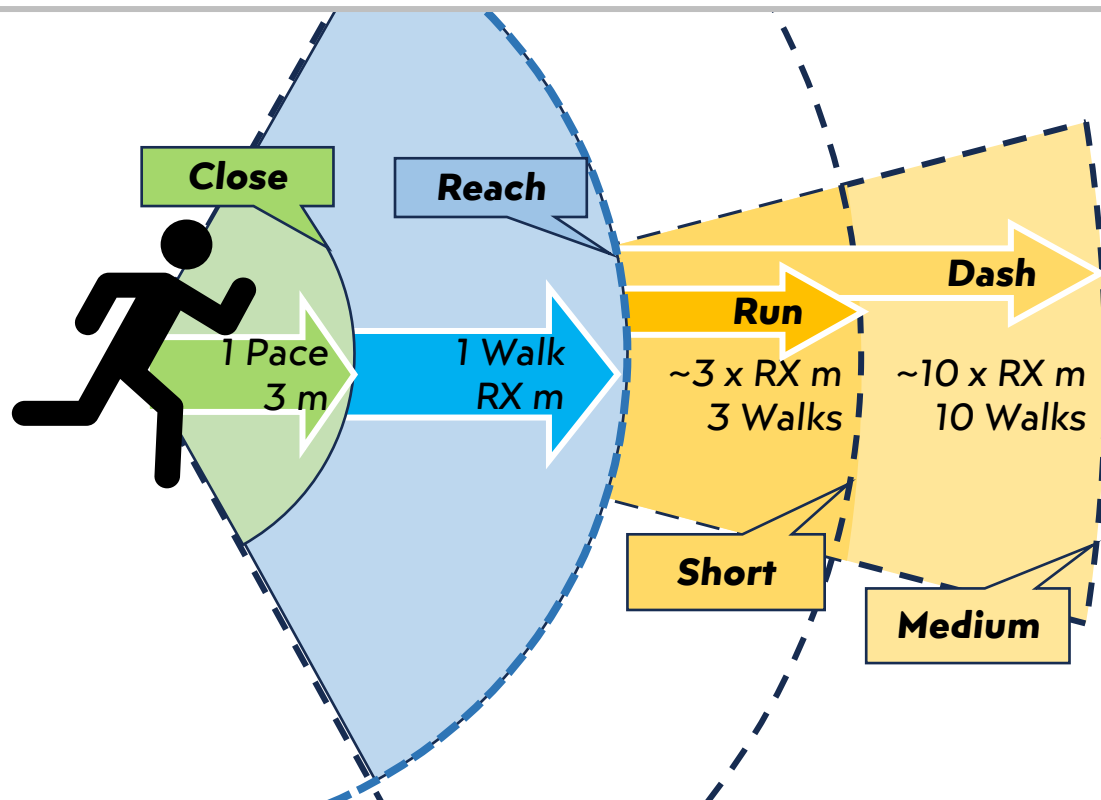

Shout—a quick dialogue or instruction.

These can be done in any order.

Players always assemble and roll a dice pool.

On Action, they choose the event.

On Response, they choose the defense.

The Move

Use the Move to travel.

Distances are usually in yards/meters (Y/M),
but some battlefields might require an adjustment.
Obstacles, barriers, climbs, and foes may reduce any travel.

A **Pace** is a short move covering 3 Y/M.

It can be done once a turn instead of a Shout.

A **Walk** is a typical Move, equal to **current Reflex Y/M**.
It ends at Reach Range.

To **Run**, use both your Action and Move for 3x Walk.
It is travel to Short range.

To **Dash**, test *Athletics* or a similar skill vs. Difficulty 6.
Minimum travel is 3x Walk.
Assign a spare die to increase the distance traveled.
e.g., a spare d6 showing a 4 gives 4 extra Walks.
Take a SLOW Crit after Dashing.

Movement tags!

The *Nimble* tag increases Walk by 1.

The *Slow Crit* tag reduces Reflex by 3.

The *Throw Crit* knocks a target away by 3x 1.
It might result in a hard landing.

The Shout

This is a simple communication action,
or an adjustment step (a Pace).
It allows for a bit of dialogue between characters,
but only a few lines. Allies may respond.

The Action

This is an **initiated** dice check.
Typically, it is an attack on an opponent,
but it could also be a skill check,
such as defusing a bomb,
disarming a trap,
haggling with a merchant, etc.
Defense does not take your action.
Defense is a **response** check.
The check can be a Call or Burn.

BODY
d6

FOCUS
d8

primal burst Spell, Chain Forge Deals harm in Zone. Duration: Instant Range: Reach/Bang Detail: Sharp	forged Magic
8 d8 3	5 d6 2

4

Amonkenet gains the Initiative.

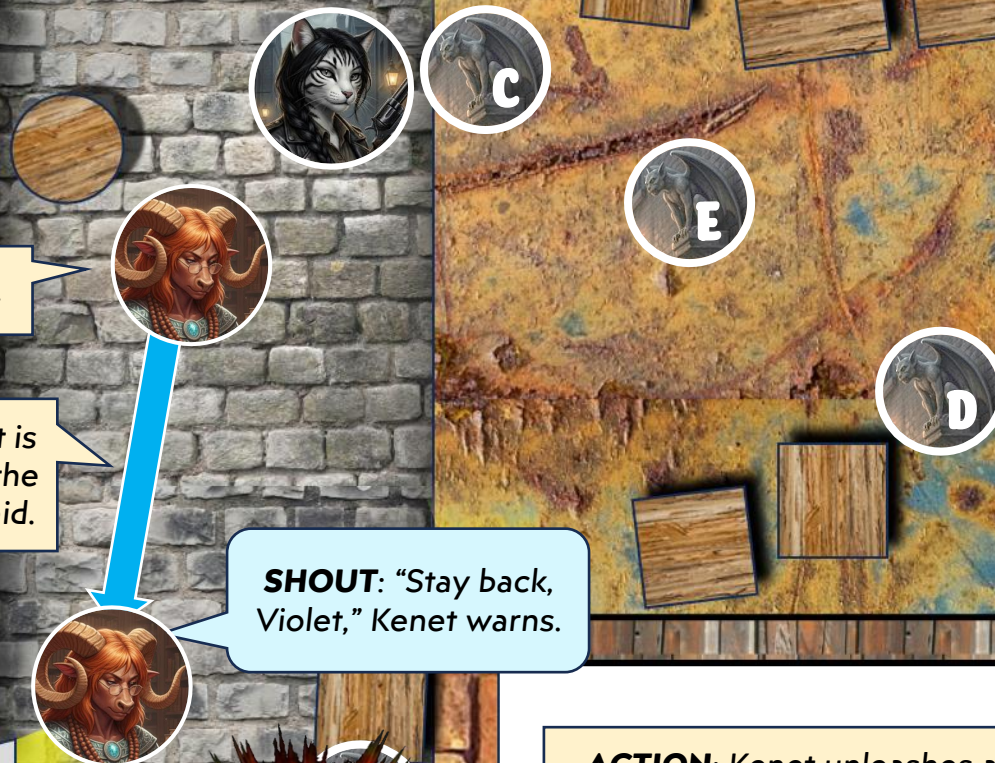

MOVE: Worried that Violet is pinned in the doorway to the south, Kenet goes to her aid.

SHOUT: "Stay back, Violet," Kenet warns.

ACTION: Kenet unleashes a fiery primal burst on A and B. This is why we don't bunch up.

PASS: Kenet hands the initiative to Qwyn.

5

Pressing the Initiative

Characters can **Press the Initiative** by **spending Reflex**.

After the start of combat, characters may spend 1 RX to gain a Move, or spend 2 RX to gain an Action.

Repeating your previous action (even if it failed the first time) reduces the cost for *that* Press by 1.

Pressing can be done while you have the initiative, or can put you back in the pool for the turn.

Pressing cannot interrupt an action in progress.

(For interrupts, see the **Escape!** Detail tag)

During a fight, keep track of the number of times you Press.

Each time you Press or Haywire, future Presses cost 1 more RX.

Press costs reset to zero at the end of the fight.

Important Tags for Pressing

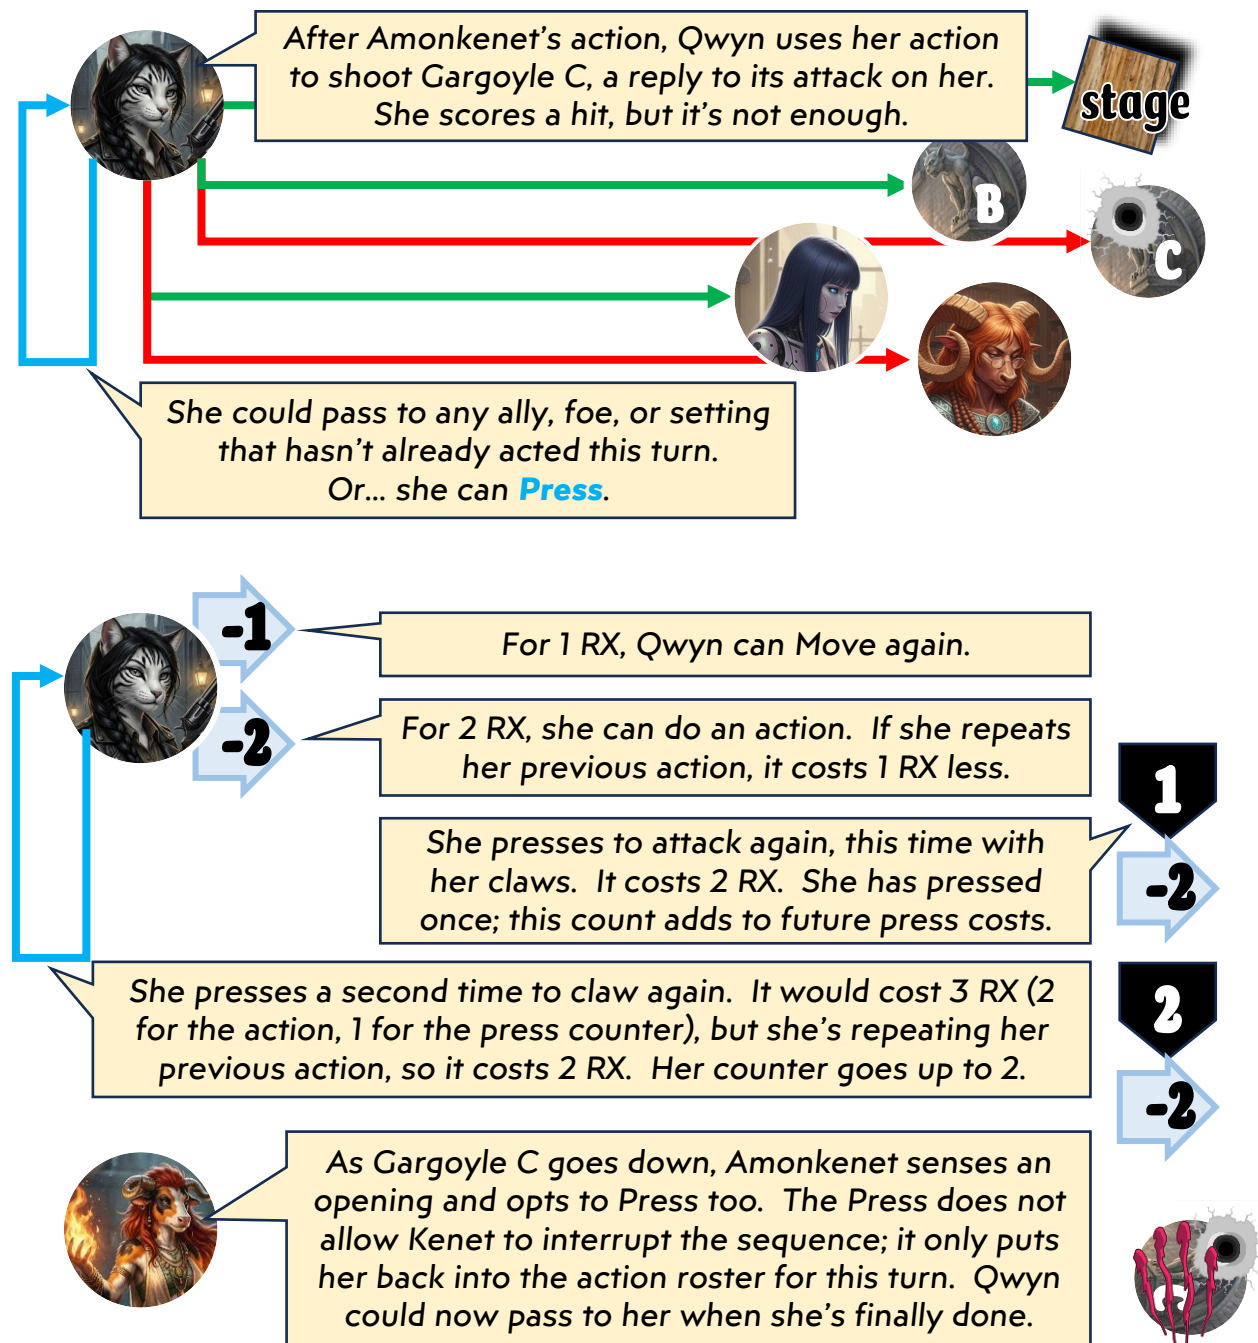

The **Quick** Build/Detail tag increases RX by 1.

The **Fast** Detail tag on a weapon reduces Press cost by 1, but only on attacks using that weapon.

Word of Warning

Remember that **current RX also sets Walk**.

Running low on RX could cut off an escape!

Doing Harm

When Qwyn hits, she deals injury to her foe.
The impact of the weapon is HP damage.

Damage gets more complicated if the weapon deals **Crit tags**.
Crit tags are injury beyond the bruising and contusions of HP.
They apply if the HP injury **exceeds the target's Grit**.

Common Crit Tags

Fast Crits apply an effect once, then fade.

DOWN target loses next action

JOLT target loses 3 Grit on next defense

SLOW target loses 3 Reflex

PAIN target loses 3 Energy

Sticky Crits last until healed.

BLEED called tiles are burned

grit 2

A high Grit keeps Crits away. Gargoyle C's meager Grit does not stop the JOLT, which lowers his Grit by 3 (to 0) for Qwyn's second Press. Things look grim for Gargoyle C; he only had 10 HP.

They are nonlethal attacks, exhausting opponents.

The Special Crits list includes tags designed for Hinder injury.

Type of Assault	Skill			Injures	Range / Crit tag
Deception or distraction	Guile			Reflex	Earshot / HOLD
Intimidation or frightening	Menace			Reflex	Visual / FEAR
Taunting or provocation	Presence			Energy	Earshot / GOAD
Searching or observation	Reason			Hidden	any / REVEAL
Persuasion or enticement	Wiles			Energy	Visual / VOW

Haggling over the price of goods could lead to heated verbal exchange.

Distraction of drowsy guards opens opportunities for stealth allies.

Loaded dialogue at a posh soiree reveals villains to the spies after them.

In this case, the HOLD tag signifies captivation, and unwillingness to leave;

the FEAR tag makes the target want to be anywhere else;

the GOAD tag aggravates the foe into focusing on their abuser;

and the VOW tag aligns the target with the dealer.

The REVEAL tag can help a keen observer discover hidden things,

a barely visible knee-high tripwire between two trees,

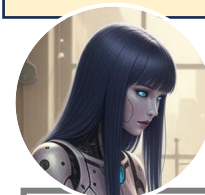

the sudden hint of floral perfume this far back in the library stacks,

the sound of distant chanting leaking through this seam in the wall,

Reason “What is it you gain from this challenge?”

Wiles	"I've got the perfect comeback."
-------	----------------------------------

Charred and desperate, Gargoyle A coils itself to pounce on Amonkenet, but Violet steps forward.

SHOUT: “Hey, look at that cute Flying Monkey,” Violet taunts.

cutting one-liner

-7

Defending against Hinders uses the same set of skills, but a defense test cannot use the **same skill** as the attack.

<i>Skill</i>	<i>Type of Defense</i>
Guile	"I see what you're trying to do."
Menace	"Your childish tricks will not work on me."
Presence	"I've heard this before from worse than you."
Reason	"What is it you gain from this challenge?"
Wiles	"I've got the perfect comeback."

Taking Injury—Soak, then Grit, then Crits

After confirming that your character has been hit, start with **Soak** and **Shield**, then check **Grit** and reduce HP, then take Crits.

Most new characters will have 0 **Soak**.

It comes from Full or Closed armor, or the **Ironclad** tag.

If it is part of armor, the Soak is applied only if the tile is called.

Soak reduces incoming impact.

It reduces the HP dealt by the incoming attack, and it applies **before Grit**.

Reducing HP loss to 0 does not stop the hit.

Note that **Piercing** reduces Soak effectiveness on the target.

Armor also has Shield tags.

Each Shield tag reduces a matching incoming Crit.

Apply unsoaked harm as HP loss.

Next, check **Grit**.

If Grit is higher or equal to the HP dealt, Crits are prevented.

If Grit is lower, whatever Crits are left after Shield tags apply.

Enraged at the slight, Gargoyle A leaps at Violet while she taunts from the south doorway.

impact: 7 HP BLEED DOWN

The impact is lessened by her metal skin (the Wired tag allows her to soak a BLEED) and 3 HP loss.

impact: 4 HP DOWN

impact: DOWN

-1

-4

grit 3

Violet's Grit isn't enough to stop the DOWN, and the collision knocks her off her feet. They tangle on the stoop.

Violet paid Energy to call her tile and still lost 4 HP. She took a lot less damage from this than Amonkenet would have.

Taking Injury—Status

0 Energy

The character is **Fatigued**,
and cannot initiate actions except movement.
They can still defend.

0 Reflex

The character is **Cornered**,
and cannot Walk, Run, or Dash.
They're restricted to a Pace (3 m) each turn.
They act last each round and cannot Press.

0 Health

The character is **Riven**,
and must burn tiles to act.

0 Energy and 0 Reflex is **Exhausted**.

0 Energy and 0 Health is **Unconscious**.

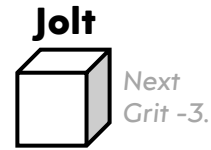

0 Reflex and 0 Health is **Paralyzed**.

0 in all three resource pools means **Death** is near.
A character that receives medical attention
within three turns may be stabilized;
Afterward, the condition is permanent.
The GM and player should negotiate on a resolution.

The Crits Dashboard

The **Crits Dashboard** on the character sheet
describes the common Crits.
Fast Crits apply once and fade at the end of the turn.
Sticky Crits can pile up and stack.

Fast Crits

Sticky Crits

It only goes wrong...

rough neighborhood

Spend 1 EN when Called.

Can be Called by GM.

d6

2

...when you're alone.

Healing—The Natural Way

Three minutes after combat,

Afire and **Poison** require immediate intervention!

The last Fast Crits fade.

Energy starts recharging (1 per 5 minutes).

One hour after combat (low activity only),

Wounds require medical attention;

Reflex starts recharging (1 per 20 minutes).

Burned Tiles recharge (1 per hour).

Sticky Crits heal (1 per 4 hours), lowest first.

One night after combat (usually 8 hours),

Health recharges (1 per hour of sleep).

A fitness check, Test 12, can eliminate a **Wound**.

Each of these steps can be sped up with medical help.

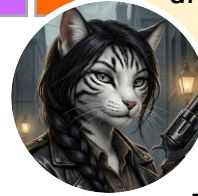

rough neighborhood

Build: Hitch 3

Spend 1 EN when Called.

Can be Called by GM.

2

4/12

Pain

Jolt

0/12

Bleed

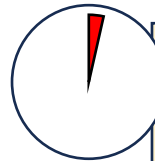

7/16

Fear

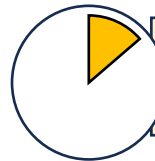

7

She burnt almost half her tiles.

The PAIN and JOLT tags fade as soon as she's away, and her Energy starts to ebb back and ease the tremors. It takes forty minutes, during which she shakes off the Fatigue and moves to a safer hideout.

After an hour, her Reflexes and lost tiles start to recover. Better yet, she can shrug off that FEAR. The BLEED takes another four hours.

Her tiles take the rest of the day to return, and her health comes back when she sleeps,... if she can.

Healing—Medical Treatment

A medical check can restore pools, remove Crits, and heal wounds. The healer's **diagnosis** is an action test that needs lots of dice. Each spare die can be assigned to repair a Resource or Crit at or below the test, BUT **each spare die assigned increases the difficulty by 2.**

The value of the assigned die is the amount of Resource restored. Crits and tiles are restored one at a time, so the value only needs to be 1 or better (easy, right?)

Diagnosis	Resource	or	Crit
4			Afire (replace with Down)
6	Energy	or	All Fading Crits (Down, Jolt)
8	Health	or	A Sticky Crit (Bleed, Fear, etc.)
10	Reflex	or	A burned tile
12			Wound

During **combat**, diagnosis difficulties increase by 4. Green checks take a turn. Yellow checks take 2 turns. Red can't be done. If the diagnosis is interrupted, the check must be restarted.

Back up: What if Violet had found Qwyn right after the incident and treated those injuries?

heal

 Build: Chain medical scanner Expert

9 d6 2

medical scanner

 Cyber Detail: Overload

4 d8 3

Violet is set up for this, with a lot of dice on this check. Even so, she spends 3 EN to add a Freebie d8.

Test = 15 7 + 5 Expert +3

Health x 6 Qwyn heals 6 HP. 10/12

Bleed 1 Violet stanches Qwyn's leak. Since it can only remove 1 crit, she can assign a low die here.

Energy x 5 + 4 Violet's spare Add comes from her Chain. With 9 EN healed, Qwyn shakes off her Fatigued status. 9/12

3 7 7/16 Violet and Qwyn both have leftovers, but Qwyn is mobile enough to get away.

Exotic Skillset—Arcana

A.K.A., Now that we have reality defined, let’s break it.

The realm of magic lets characters reshape reality.

Arcana Skills

Tiles with these skills cost 2 XP before their d4.

- Augur

divination, mind-reading, illusion, charms
- Forge

conjunction, elemental forces, shields
- Twist

repair, throws, healing, movement

Spells

Spells are tools described on Gear tiles.

Each Arcana skill tile supports up to 1 spell tiles.

Each spell tile gains the **Chain** tag,
but it can only be chained to an Arcana skill tile.
Spell tiles cannot be chained to other tiles.

When the spell tile is called, the skill tile is called along with it.

Casting Test

The environment resists magic.

The spell’s XP investment is its Test to cast.

The action check must meet the Test to trigger the spell.

The chained tile reduces the Test difficulty by its 1.

Sacrifice tags allow the spell to consume other resources,
and be cast more easily.

primal burst

Spell, Chain Forge
Deals 1 harm in Zone.
Duration: Instant
Range: Reach/Bang
Detail: Sharp

8

d8

3

forge

Magic

5

d6

2

Amonkenet must have an action
test of 6 or better to have the spell
function. It might still be evaded,
so she wants it to be higher.

She paid 2XP extra for this tile.
It currently supports two spell
tiles, and it reduces the casting
difficulty for a called spell by 2.

Arcane Detail Tags

Design Benefits	improve	how it works
Escape! (4 XP)	evasion	useable as a reaction
Rite (-2 XP)	noncombat casting	1 min cast time
Sustain (-3 XP)	duration	spend 1 res / 3 turns
Sacrifice	reduce	how it works
Sap (-2 XP)	cost, difficulty	Spend 1 EN to cast
Tire (-3 XP)	cost, difficulty	Spend 1 RX to cast
Drain (-4 XP)	cost, difficulty	Spend 1 HP to cast
Witch (-6 XP)	cost, difficulty	Mote or burn to cast.

Spells—Augur

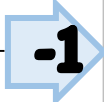

Augur spells deal with communication, detection, and mentality.
Some have an edge of dominance to them.

Sap Tag	Range / Duration	Function
Captivate	Reach / Instant	deal Hold to foe
Ghost	Short / Sustain	shape Item moving image only
Precision	Touch / 5 minutes	buff MIND or POWER
Sense Substance	Medium / Sustain	show specific material
Talk with Nature	Crowd 2 / Sustain	show your mind to plant or animal
Unseen	Touch / 15 minutes	buff Stealth skill on ally
Whisper	Crowd 5 / Sustain	show your mind to allies

Tire Tag	Range / Duration	Function
Aid	Close / Instant	give spell's dice to ally dice pool
Charm Animal	Touch / 1 hour	deal Vow to animal
Halo	Bang / 1 minute	deal Harm to foe entering zone
Listen In	Crowd 10 / Sustain	show surface thoughts
Night Vision	Short / 1 minute	show range in low light
Song & Dance	Short / Sustain	shape Item moving image with sound

Drain Tag	Range / Duration	Function
Dominate	Bang / Instant	deal Fear to all in zone
Phantom	Touch / Sustain	shape Bot unsolid ally

Bang? Boom?

Spells—Forge

Forge spells deal with conjuration, directed injury, and protection.
They can reinforce objects, people, or actions.

Sap Tag	Range / Duration	Function
Bolster	Touch / 15 minutes	give Tough to ally
Bubbles	Short / Sustain	shape breathable air for  allies
Energize Machinery	Boom / Sustain	give Energy to devices
Infuse Weapon	Close / 1 minute	give [ Harm and JOLT] to Gear Tile
Primal Bolt	Close / Instant	give Piercing and deal  harm
Strength	Touch / 5 minutes	buff  BODY or FOCUS
Toxic Cloud	Reach / Blam / Instant	shape Poison air

Tire Tag	Range / Duration	Function
Add Ammo	Touch / 1 minute	take Reload and 1 Flaw
Flak Shield	Reach / 1 minute	give Ironclad to  allies
Nimbus	Reach / 5 minutes	give spell's dice to ally's evasion pool
Primal Beam	Reach / Sweep / Instant	deal  Harm and Sharp

Drain Tag	Range / Duration	Function
Detonate	Close / Blam / Instant	deal Afire and  Harm
Infuse Armor	Close / 1 minute	buff  Grit and 1 Shield to Gear Tile
Primal Burst	Reach / Bang / Instant	deal  Harm and Throw

Sustain

Spells can be maintained by sacrificing resources.
After **three turns**,
spend a resource point (EN, RX, HP) to fuel the spell.
Multiple spells can be sustained.
Trauma or other disruptions can force a spell
retention check.

They can also transform one material into another.

 -1

Add the **Escape!** tag to make this one a getaway.

Buy off the **Sacrifice Tag** (Sap, Tire, or Drain).

System Concept—All the Ranges

Linear Range

Uses a 120° forward arc, or a third of a circle.

Close Range equals the Pace.

Reach Range equals the Walk, or 1x current RX.

Short Range equals the Run.

Medium Range equals the Dash.

Area and Volume

The **Zone** enlarges the arc to a circular area.

The **Dome** enlarges the arc to a half-sphere space.

Crowd

Sometimes it's not the space, it's the people or creatures in the space.

The listed number counts the nearest X targets at the time of the event.

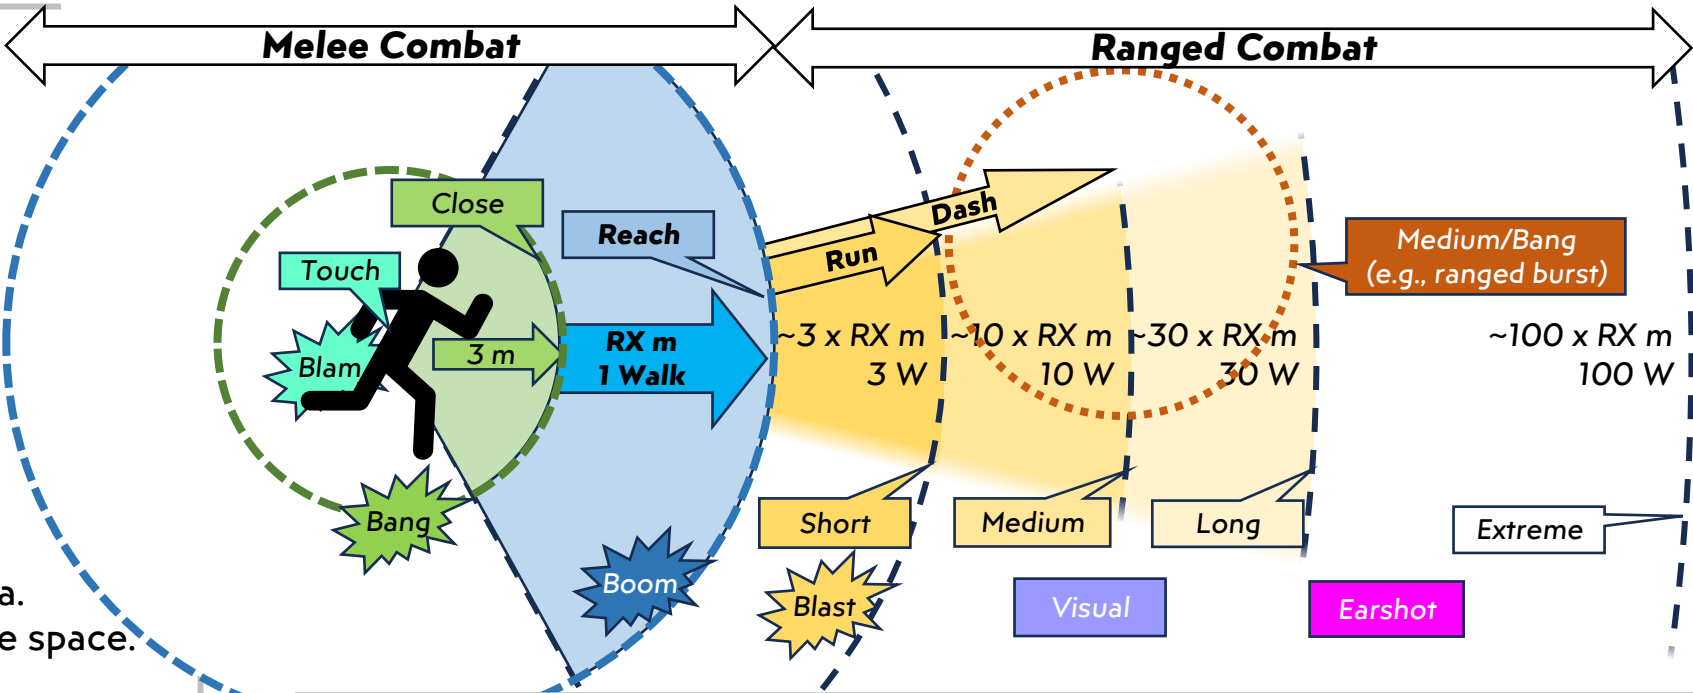

Duration

Spells also consider Time.

Note that spells that create effects produce it, but may not determine how long it lasts.

Calculating XP for Spell Ranges

Add the Row and Column values in the table.

Space and Time Tags

	Linear	Move	Zone	Dome	Crowd	Time
	+0	equals	+2	+4	+3	+1
Close						
-2	Touch		Blam	Cup	1	Instant
-1	Close	Pace	Bang	Chest	2 (Sweep)	1 min
0	Reach	Walk	Boom	Cart	5	5 mins
Ranged						
1		Throw	Earshot	Room	10	15 mins
2	Short	Run	Blast		50	1 hour
3	Medium	Dash			100	6 hours
4	Visual			House	500	1 day
5	Long				1000	3 days
6						10 days
7	Extreme					1 month

Visual is a sightline; Earshot is a Zone. Both situationally may extend to Extreme range.

Modifying Weapon Range on the Fly

Range and Duration can be altered during weapon use.
These modifications are one-use,
but they can be repeated as often as desired.

After selecting dice for attack and damage,
apply an unused die in the pool to any Range or Duration tag.
The first die applied needs a 3 to raise that tag by one increment
on the **Space and Time Tags** table (previous page).
The second die applied needs a 4,
and the third die needs a 5, etc.

These dice can increase linear range several times,
or mix to raise range, zone, and duration.

This also works for spells, but
Instant, Sustained, and Rite Durations cannot be modified.

psychic switchboard

Spell, Chain Augur
Reveal your mind to allies.
Duration: Sustain
Range: Crowd 5
Crit: REVEAL (on self)

9 3d4 3

Duration can't be modified here, but what if your party is bigger than five people? A die with a 3 pushes Crowd to 10 for this cast.

silver pistol

Near Ranged Weapon
Range: Reach
Detail: Reload Little

1 d4 1

Qwyn has a spare die on her pistol pool, and this time it came out high enough to raise her Reach range to Short. If she uses it for that, it won't feed the Reload flaw, and she'll run out of ammo.

primal burst

Spell, Chain Forge
Deals 1 harm in Zone.
Duration: Instant
Range: Reach/Bang
Detail: Sharp

8 d8 3

Amonkenet's spell range can be extended in more than one way. The freebie die that she bought was a disappointment, but it will raise Range to Short and Bang to Boom. If she used both to improve the Zone, the spell's new explosive radius would engulf her too!

precision

Spell, Chain Augur
Gives 1 to MIND or POWER.
Duration: 5 minutes
Range: Touch
Sap (1 EN to cast)

1 d4 1

Two spare dice of 3 and 4 or better could lengthen this spell to an hour. Lots of extra dice could in theory create an enchanted ring that lasts for centuries, or at least until it's thrown into a volcano.

Range: Reach
Detail: Keen Throw
Tire (1 RX to cast)

7 d6 2

The final version.

Shadow Play—Qi and Id

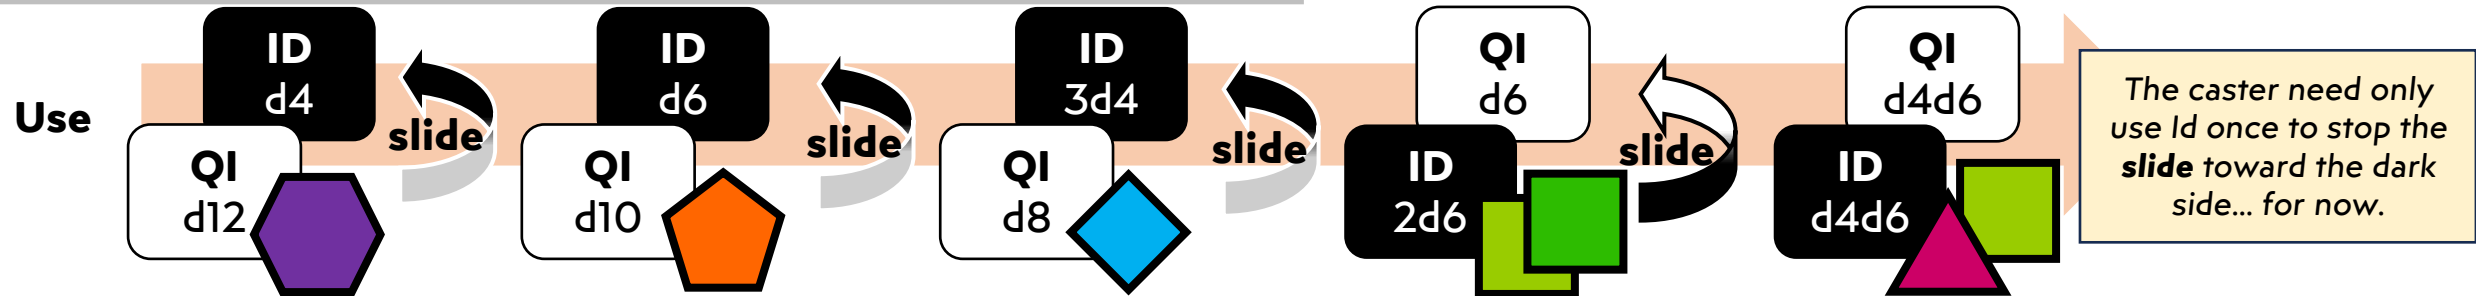

In some realms, magic is linked to a struggle between good and evil, honor and corruption, light and dark, or order and chaos. Magic and its power stem from gods, fate, or ancient forces. For these worlds, there are two **Shadow** stats available: Qi and Id.

To improve Qi or Id, XP is spent to raise **the higher of the pair**. This is necessary because the stat values change during play.

Any tile can be built with a Qi or Id color box instead of one of the rosette rainbow. Qi's color is **White**. Id's color is **Black**.

Both contribute to the **Shadow Resource pool**. Note that having the Shadow Resource pool lowers your other pools!

Whenever you invoke a Shadow stat to cast, 1 of its value **slides** to the other stat. The lowest either can go is d3. The difference in is called **aberration**. Characters with high aberration may begin to experience side-effects.

Advancement

Qi embodies light, order, life, and healing. It emphasizes skill and complexity.

+1

ID d4

Id embraces dark, chaos, decay, and destruction. It emphasizes power and control.

Qi d4

+2

This one costs 1 more than usual because Id is already a d4.

Qi d6

+2

They're both at d4, so advancing either to a d6 is the usual 2 XP.

+3

ID d6

+2

ID d4d6

Qi d4d6

+3

For simplicity's sake, every even-numbered costs 1 XP extra.

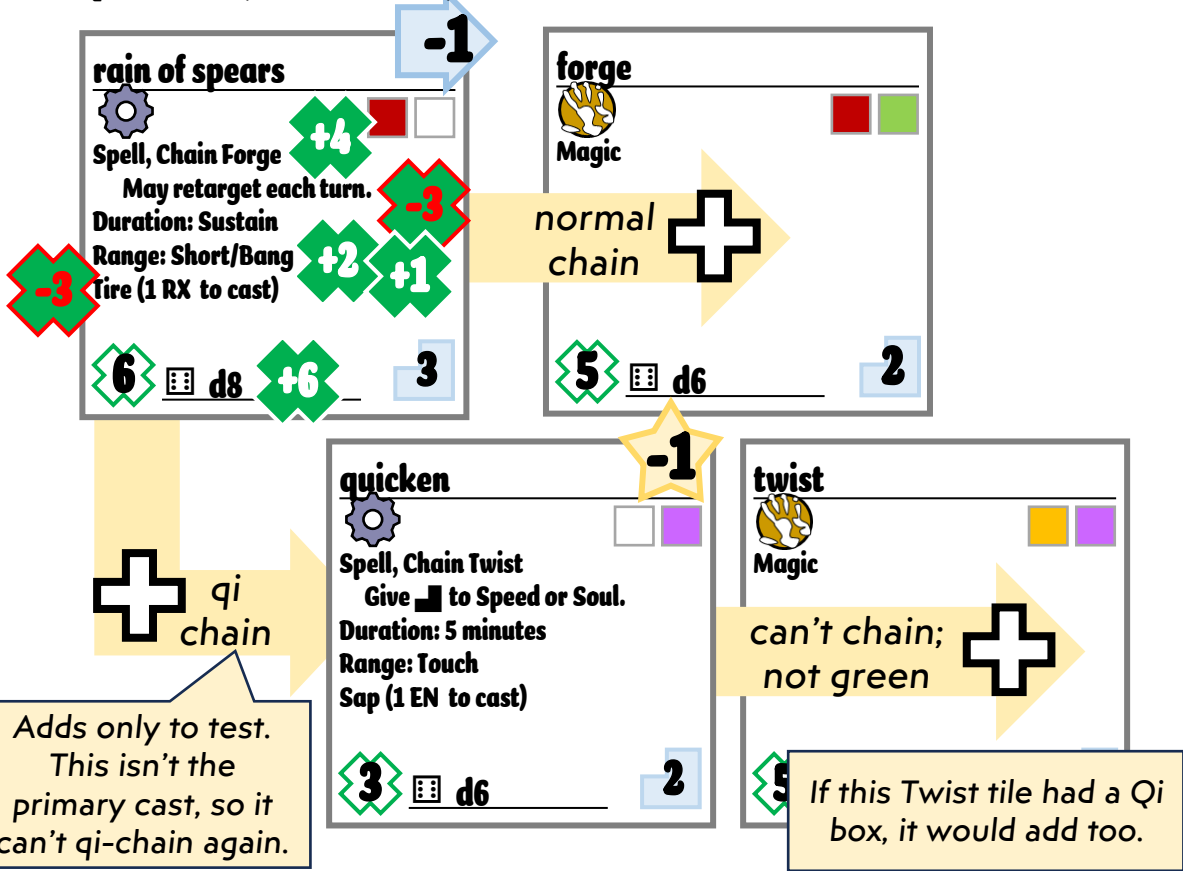

It says 'or'.

2

Using Shadow Tiles

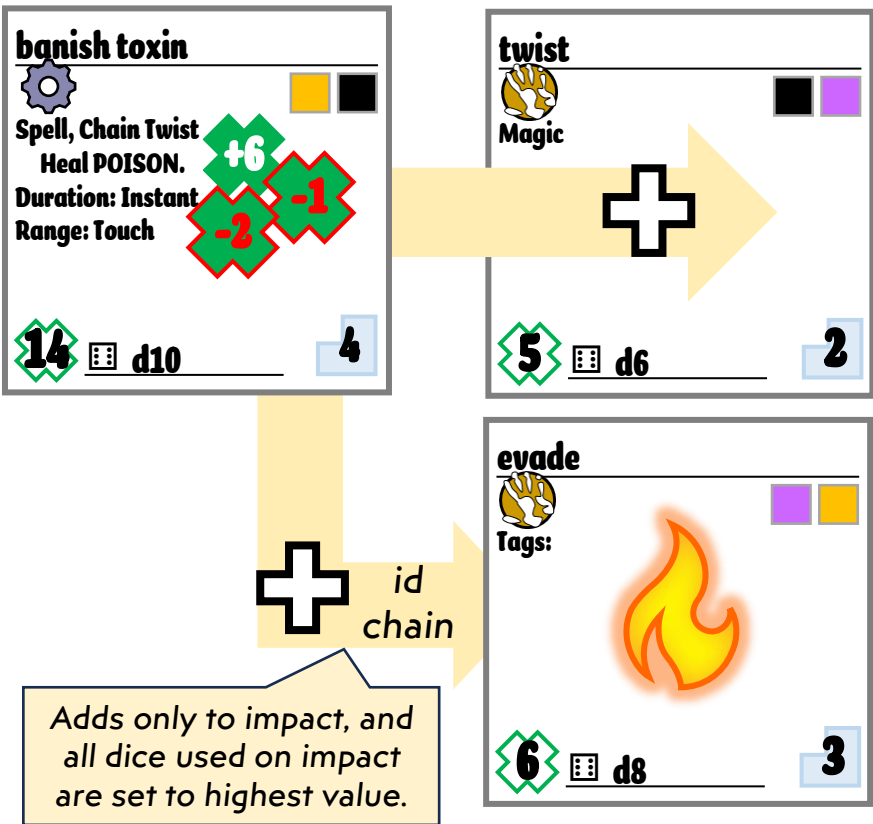

Qi allows bending reality toward creation and intricacy.
White Qi boxes are **any color but Black**.
Casting with Qi calls 1 extra tile,
but its Add and dice apply to the **test**.
If two spells are called, they are cast at the same time,
if the test beats their summed difficulty.

Qi Cast (on Green)

Id allows bending reality toward entropy and change.
Black Id boxes are **any color but White**.
Casting with Id automatically calls 1 extra tile,
but the Add and dice apply to the **impact**.
The extra tile is burned,
but **all impact dice** are **copied**.

Id Cast (on Yellow)

Shadow as a Resource

The **Shadow Resource pool** is equal to the total of White and Black boxes on a character's tiles. The pool can be spent as if it were any other resource, including taking injury, pressing for initiative, etc. It does not improve references, e.g., Walk distance.

If a freebie die is bought with Shadow, maximize that die.

Reduce spell difficulty by Shadow for 1 point.

Increase spell impact by Shadow for 1 point.

Recovering Shadow

Half of the shadowcaster's maximum points recovers at dawn, the other half at dusk. In some situations, dawn and dusk must be simulated, or might be interpreted as falling asleep and waking.

Shadow Tags

A tile with Qi can gain the **Light** Build/Detail tag. When a Light tile is called, the slide shifts  toward Qi. If it cannot slide (Id is already minimum d3), it causes an Aberration check.

Tiles with Id can have the **Night** Build/Detail tag, which drives the slide toward Id. If the slide is prevented (Qi is already minimum d3), it causes an Aberration check.

Tiles with Qi or Id can have the **Gloom** Build/Detail tag. This tag drives slide toward balance, an even split between Qi and Id. If the slide is prevented (Qi and Id are equal), it heals a Shadow point.

Aberration

If the roll causing an Aberration check was Haywire, the character displays visual symptoms of its alignment. This transformation is up to the GM, but could be haloes, auras, and feathers for Light and horns, cinereous skin, and hooves for Night. More crucially, the Aberration check is a Footfall that draws others of the opposite alignment who might be spoiling for a fight. Tiles describing Aberration probably come from Stranger Celestials, and begin with a Hitch.

Exotic Skillset—Stranger

A.K.A., *The stuff for people with animal, plant, or alien parts and abilities.*

This is the realm of strange creatures at the intersection of monstrosity and hypercognition.

Stranger Skills—The Bestial Side

These skills represent abilities that animal- or plant-kin, or hybrid humanoids, might need to flesh out their abilities. It tends to be short on interactive skill.

Flight	 	maneuvers in air or fluid
Instinct	 	extended senses and perceptions
Shape	 	divergent body form or form alteration

Tiles with these skills cost 2 XP before their d4.

They start with the **Bestial** Exotic tag.

A character with the Bestial tag
sets their Pace equal to their Walk.

For each tile with the Bestial tag,
add an extra point to one Resource.

For 4 XP, add a **Bestial** tag to a Trait or Story tile.

Exotic tags do not count against tag limits for tiles.

Qwyn's tiles fit with the Bestial Stranger concept.

sleek & silky

d4

catfolk

Stranger, Bestial

This tile now gives her a 3rd resource point to add anywhere.

d6

Shapeshifting and Were-creatures

Small parts of a Bestial Stranger’s nature, e.g. fangs or claws, can be concealed until needed.

A hidden natural armament can use the **Ambush** Build tag, which reduces the target’s first defense to zero after the tool’s deployment.

More complete form changes use **Shape** to control a change, and benefit from the **While X** Build tag.

The While X tag is -4 XP,

The X identifies the shape that can use the tile, e.g. *While Werewolf*.

The tile is in play whenever the character is a Werewolf, and **buried** when the Wolf is dormant.

Abilities that the Werewolf cannot use can be tagged in reverse, such that *While Human* tiles get buried whenever the wolf comes out to play.

While X cannot be used as a Detail tag on ordinary gear.

While X can also work for gelatinous aliens and xenomorphs, morphing robots, and transforming superheroes.

If the While X tag is paid off, the feature is evident to observers but may become a fusion of the two originally separate shapes.

eighteen claws

Melee Weapon

Range: Touch

Detail: Fast, Ambush

Crit: JOLT

10 d8

Qwyn’s claws could make firing a gun difficult, but with Ambush, they’re stowed until she really needs them. According to AI imagination, so is the feline aspect of her face.

Maybe Qwyn is a secret weretiger!

feral maw

Stranger, Bestial

Build: Ambush

Tire: Spend 1 RX to trigger

4 d4

beastly yowl

Stranger, Bestial

Build: While Weretiger

Crit: FEAR

4 d4

This set of tiles has four Bestial tags and three While tags. It gives 7 HP, 2 RX, 1 EN, and 4 more split how she likes. The claws can be deployed at any time; the rest is hidden until the Tiger roars... all for 13 XP.

Stranger Skills—Celestial Side

These skills cover abilities that can bend or break cosmic law at the fundamental level, travel through space and time, and leave physicality behind.

- Dreaming  twisting light into images or camouflage
- Kinesis  shaping matter and spacetime
- Network  net-running and mind-body splits

Tiles with these skills cost 2 XP before their d4.
They start with the **Celestial** Exotic tag.

The Celestial character may pick an **Aural** or **Astral** aspect.
Count tiles with Celestial for the Aural / Astral rank.
The Aural rank on the Linear range column gives the reach
the character’s projected senses (forward arc!)
The Astral rank on the Duration column
gives the length of time the character can be separate
from its physical body (even if the body has died!)

For 4 XP, add a **Celestial** tag to a Trait or Story tile.

Exotic tags do not count
against tag limits for tiles.

Space and Time Tags

	Linear	Time
1		15 mins
2	Short	1 hour
3	Medium	6 hours
4	Visual	1 day
5	Long	3 days
6		10 days
7	Extreme	1 month

May d4s Be With You

In a story set among the stars, characters will need a broader set of skills. The following list offers those alternatives, and your GM may produce others.

These skills are normal cost,
augment (not replace) the normal skills list,
and do not need an Exotic tag.

- Adapt  alignment with alien environments
- Dogfight  maneuvers in aerial or space vehicles
- Gunner  use of ship-based armaments for combat
- Hardsuit  use of powered armors or body vehicles
- Navigate  3-D piloting and astronavigation
- Psinger  contact with aliens and their tech
- Vibro  energy variants of melee weapons
- Xenology  knowledge of aliens and their tech
- Zappers  energy variants of ranged weapons

dreaming

Stranger, Celestial

alien ooze

Stranger, Celestial

astral projection

Stranger, Celestial

This gelatinous creature can cover itself with image projection to hide and either project its senses up to Medium range (Aural) or survive without access to its living tissue for up to 6 hours (Astral).

d6

d8

d6

Exotic Skillset—Cyber

A.K.A., in case you want to know what really makes your character tick.

This is the realm of clockwork constructs, cyborgs, and robots.

Cyber Skills

Tools	 	specialized limbs and attachments
Sense	 	extended senses and perceptions
Drive	 	energy or machine control

Tiles with these skills cost 2 XP before their d4.
They start with the **Cyber** Exotic tag.
The Cyber tag can be added to other tiles for 2 XP.
Gear tiles often have flaws that offset this cost.

Core adds its current value to Grit.

Each tile with the Cyber tag contributes 1 point to the **Core Resource Pool**.

Core can be spent for a variety of functions some of which are shown on the right.

Recovering Core

Core points recover at 1 per hour, unless the cyborg, robot, or norg has a **battery pack** or an hour spent on a **supercharger**. If so, all Core points are restored.

Core Resource Pool

<u>Build/Detail tag</u>	<u>how it works</u>	
Antivenin	1 Core: Reduce POISON	
Boost	1 Core: Maximize dice on [Stat]	
Breathless	1 Core: Survive without air 6 hours	
Charged	1 Core: Go without fuel for 1 day	
Enhanced	1 Core: Maximize dice on this tile	
Fireproof	1 Core: Reduce AFIRE	
Machine	1 Core: Add Core to Soak	
Plated	1 Core: Reduce WOUND	
Reticle	1 Core: Press without increasing count	
Sleepless	1 Core: Go without sleep for 1 day	
Spacewalk	1 Core: Survive vacuum for 1 hour	
Wired	1 Core: Reduce BLEED	
<u>Build/Detail tag</u>	<u>how it works</u>	
Tether	(   tiles) Copy dice on tile while character is connected to network, hivemind, psychic frequency, etc.	
Unborn	(   tiles) Tile advances for 1 XP less on dice and any tag of 3 XP or higher. Used for creatures activated instead of grown.	
Zenith	(   tiles) One reroll dice on dice in the pool below  . Used for creatures that were designed or built rather than evolved.	

Cyber Exotic tags do not count against tag limits, but Build tags do.

Cyber Dawn—The Era of the Cyborg

The earliest phase of mechanical replacement is cybernetic repair.
Equipment is mostly physical enhancement.
Cyborgs contend with badly attached hardware (**Torn**),
and/or error-prone software (**Glitch**).
Equipment is hard to interface with (**Feedback**)
and may cause negative reactions (**Stigma**).

Cyber Morning—The Era of the Robot

Robots are not yet complex thinkers (**Rube, Overload**)
and/or may have limited emotional range (**Numb**).
They are often considered lesser people (**Stigma**)
or used as disposable laborers or warriors (**Bound**).
Cybernetic replacement can strip away privacy (**Adware**),
or control though implants (**Hacked, Malware**).
The line between living and mechanical begins to blur.

Cyber Noon—The Singularity Event

Machines can think, and the machine-mind barrier has been broken,
but problems for machines (**Glitch, Adware, Malware**)
appear in live minds, which can now be edited (**Hacked**).
Robots reach full consciousness
but still fight for autonomy (**Stigma, Bound**).
Solitude and lack of connection become alien (**Numb, Solo**),
but it is also possible to get too much data (**Overload**).

Cyber Eve—The Era of the Norg

The line separating man from machine is erased,
and some synthetic constructs may be organic.
Robots diversify into Stranger configurations (**Undroid**),
but may have draining components (**Hungry**).
Norgs are minds that are crafted whole, not born.
They can be put into any body, living or machine.
Childhood ends. It takes too long.
Transplanting still requires adjustment (**Feedback**),
but can produce Als in living frames.

Flaw	how it works
Adware	Constant scrutiny
Bound	owned or controlled by another
Feedback	On any 1, take SLOW
Glitch	Haywire counts 1s and 2s
Hacked	Recall may be false
Hungry	1 Core to call
Malware	Embedded VOW
Numb	Reroll each maxed die
Overload	Haywire deals PAIN
Rube	On any 1, take DOWN
Solo	Haywire deals FEAR
Stigma	Reactions may be hostile
Torn	Haywire deals 1 HP
Undroid	Haywire deals WOUND

Gizmo

+4

This Detail tag converts a Spell into an independent tool.
Each Gizmo has █ HP and may Break on a Haywire roll, but it does not need Arcane skills or spell tests.
Gizmos cannot use Qi or Id.
Gizmo tiles must feature the referred color on the list below, and may Chain to an ordinary skill tile with that color.
If it does not Chain a skill, Gizmo only costs 2 XP.

Red	Bolster, Flak Shield, Shapeshift, Tunnel
Orange	Detonate, Dominate, Energize, Infuse Armor/Weapon
Yellow	Aid, Captivate, Charm Creature, Restore, Talk With, Whisper
Green	Bubbles, Halo, Listen In, Primal Bolt, Sidekick, Toxic Cloud
Blue	Fix, Jam, Nightvision, Primal Beam, Sense Substance
Purple	Bladedance, Dash, Knockback, Unseen, Wings

A character can have up to MIND+FOCUS █ gizmos.

Sliver

+2

This Build tag grafts a Spell into the body as an ability, e.g., spit poison, breathe fire, boost Speed, etc.
As a **Knack** (Silver only), the ability chains to a skill tile and can use Qi and Id but does not have to.
Implants (coupled with Gizmo) cannot Break or use Qi/Id.
A character can have up to BODY+POWER █ slivers.

She might eventually put Cyber on this too.

infuse weapon

Spell, Chain Forge
Gives █ Harm and JOLT tag to a Gear tile.
Duration: 1 minute
Range: Melee
Sap (1 EN to cast)

 d4

Violet's laser cutter needs a bit of reinforcement. A little wristband gizmo with a USB connector could juice its function. This spell can be retooled to represent the attachment.

wristband accelerator

Gizmo
Gives █ Harm and PAIN tag to a Gear tile.
Duration: 1 minute
Range: Touch
Sap (1 EN to cast)

 d6

The color change doesn't matter because it isn't a spell anymore. The lost Chain and lower Range free up 3 XP, so Gizmo only costs 1 XP more. Violet wants more punch than a simple Jolt. The device has 2 HP.

Note that it still requires an action to trigger the accelerator. Its boost to the laser in her arm lasts for six turns.

integrated accelerator

Implant
Gives █ Harm and PAIN tag to a Gear tile.
Duration: 1 minute
Range: Touch

 d6

Later she decides to build this tool into her chassis to keep it better protected. Turning it into an Implant only costs two 2 XP and protects it from direct damage. She spends 2 XP more to remove the Energy requirement on its use.

Rex

Chapter 4: Finessing the System

Ammo Tiles	66-67
Ammo Builder	67
The Apothecary and the Geomancer	68
Crafting a Potion	69

...can ruin everything.

A chance encounter...

Ammo

Ammo tiles add potency during combat, but also have application in crafting. They augment the dice pool, often when a Gear tile is called. They have no dice of their own.

To **activate an Ammo tile**, the Target must be in use. Assign a spare die from your pool to the Ammo. The Ammo tile **replaces** the Reload flaw on a firearm. If the devoted die equals or beats the Ammo **Supply** (+), retain the Ammo tile after this action resolves. Otherwise, it is **buried** (e.g., the Ammo runs out until replaced).

hollowpoint

4

For ranged weapon:
On any 2, give Sticky Sharp.
On any 3, deal PAIN.

3

buckshot

3

For ranged weapon:
For each 2, give Sweep.
For each 2, give DOWN.

2

sheaf arrows

4

For ranged bow weapon:
On any 2, bow gains Piercing.
For each 3, harm + HP.
On any 4, deal WOUND.

4

Refined ammunition for weapons is the basic concept of Ammo tiles, but they have wider application.

flurry of fists

1

For barehand attack:
On roll, Repeat, but +2 to +.

2

power cell

5

For hard armor:
On roll, give Sticky Motorized on Power.

2

cyber supercharger

5

For Cyber:
On each 2, give Sticky heal 1 Core point.

2

This Cyber tag counts toward Core.

They can represent specialized attack moves or quick-use resources.

They can be compiled as reagents for building devices, potions, or other items.

flame mote

3

For spell pool:
For each 4, deal AFIRE.
On any 2, gain Boom Zone.

2

nightshade

2

For potion crafting:
For each 4, deal POISON.
On any 4, deal WOUND.

3

quartz

5

For crystal use:
On any 3, heal + HP.
On any 2, give Sticky Rugged.

1

The number in the + is the number the assigned die must beat each use to keep the Ammo. Otherwise, it is buried (e.g., used up until replaced).

The Ammo might not perform every time, but for its low cost, it can have very high impact.

Feeding an Ammo tile satisfies the Reload Flaw.

1

AMMO BUILDER. Start Here.

Sum ⚙ as you build.

Define the Tool

Examples:
For Melee Weapon:
On Potion craft:
On Knuckles attack:
For Soft Armor:

These add 0⚙.
If it has more than
one tool, add 4⚙.

Lines

The Ammo tile's lines define
its function. One tile can
have up to three lines.

On Any X
On Each X
On roll

If any die in the pool produces X, the line trips
For each X rolled in the pool, the line trips
When the roll is made, the line trips, but only once

0⚙
2⚙
4⚙

Line Trigger

When does the line work?
Most lines activate when one or
more dice in the pool produce a
specific number, X.

First Line -3⚙
Second Line 0⚙
Third Line 3⚙

Pick X

Each number does something different. Small dice
will trigger functions more often than big dice.
Pick one from any box. The cost sets the X.

Harm/Heal + Energy.

1⚙

Harm/Heal + Reflex.

2⚙

Deal/Reduce a 2XP Crit.
Give/Take a 2XP Build/Detail tag.
Maximize [stat] dice.

Harm/Heal + Health.

3⚙

Deal/Reduce a 3XP Crit.
Give/Take a 3XP Build/Detail tag.
Extend Range/Duration 1 step.

Deal/Reduce a 4XP Crit.

4⚙

Give/Take a 4XP Build/Detail tag.

Recover 1 tile.

5⚙

Note: Crits, tags, and stats
are fixed when chosen.

Modify the Line

Functions can be reduced
in cost with limits or
enhanced with riders.

Tag on the fly
Sticky
Restriction
Repeat

rather than fixed +X⚙
it lasts 1 minute (6t) +XX⚙
narrow its focus -1⚙
do it again now 4⚙

Need another Line?

If so, go back and do it
again. If not, finish up.

Split ⚙

Divide the total
between ⚙ and +.

Done!

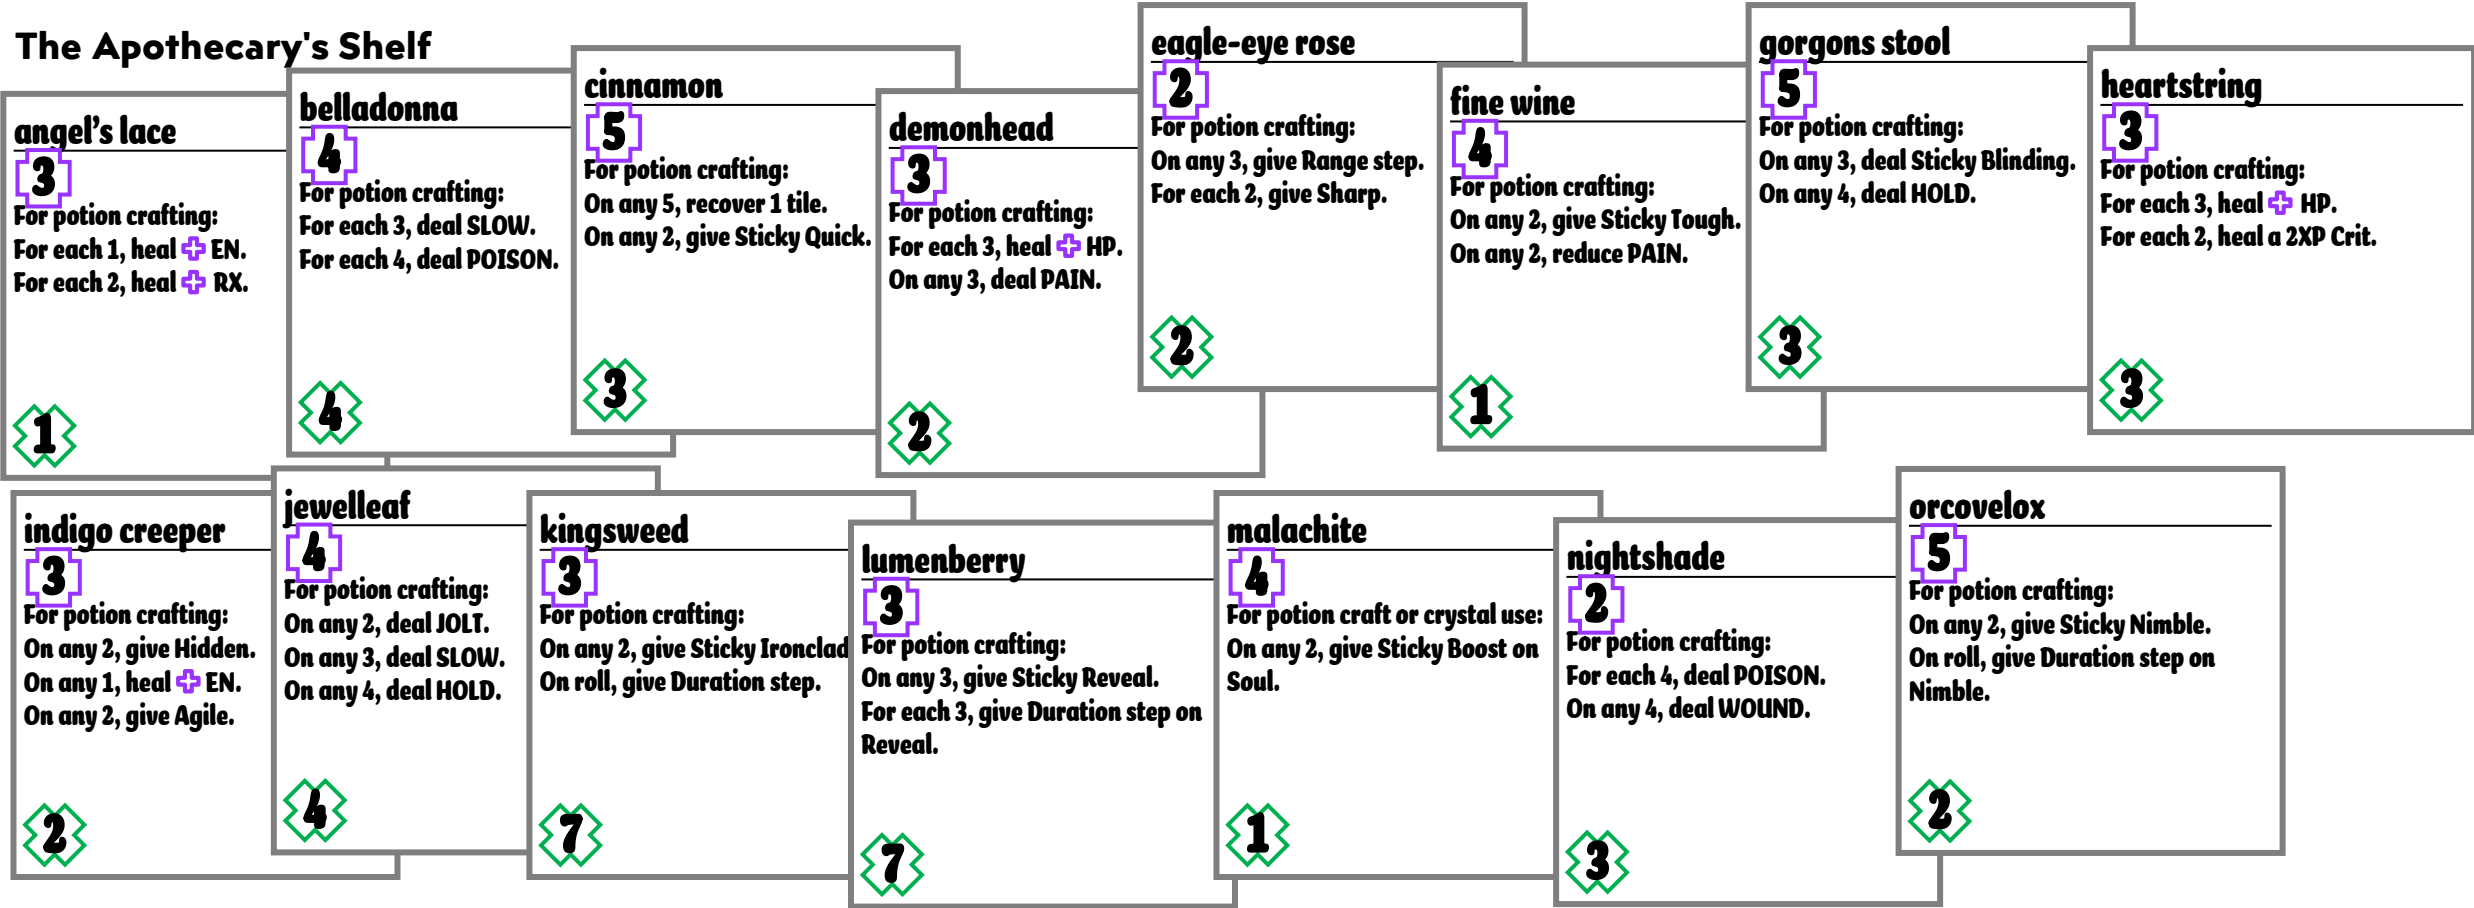

Write to the tile.

Both are minimum 1.

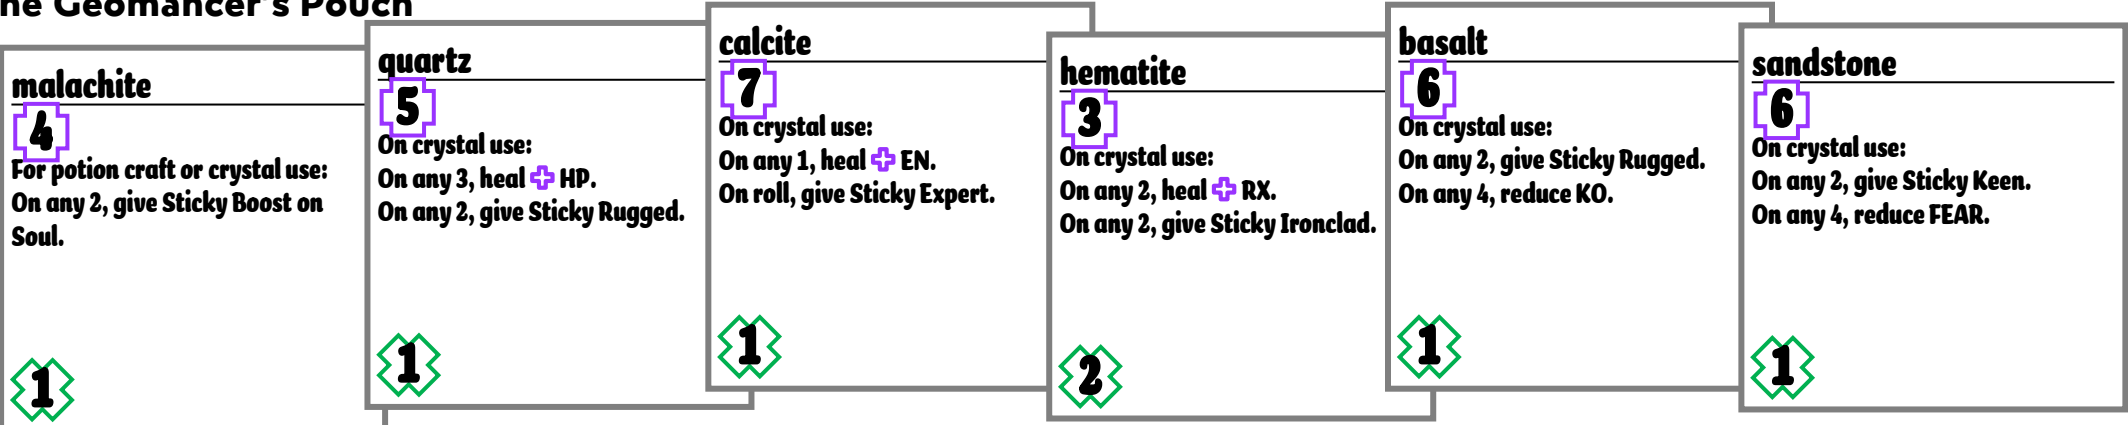

⚙ > +
⚙ = +
⚙ < +

pricey but sustainable
balanced, but may run out sometimes
cheap, but probably used once

The Apothecary's Shelf

The Geomancer's Pouch

Crafting Example—Potions

Note: Violet spent XP to learn about these herbs. Called for Gold/Green, she Burns her Story tile for an extra die.

1 d4

1

Minimum Test is the sum of the reagent XP, or 4. She's in a hurry and not in a lab, so the GM amps it to an 8.

She's had better rolls.

angel's lace
3
For potion crafting:
For each 1, heal + EN.
For each 2, heal + RX.

1

This one ran out.

heartstring
3
For potion crafting:
For each 3, heal + HP.
For each 2, heal a 2XP Crit.

3

Still got some left.

Test = 8

6

2

Impact (Doses) = 4

3

1

4 doses is low, but because of the Add left over, the GM doubles her productivity.

From her reagent shelf, she includes Angels Lace and Heartstring. Any more would make the potion hard to craft.

Eight potions made.
A dose heals 6 EN, 3 RX, 3 HP, and a 2XP Crit.

Glossary

Action		character makes test using a dice pool
Adapt		self-modification of fluid or flexible form
Ammo		special tile; components or reagents for crafting
Athletics		skill; endurance, short-range weapons
Augur		skill; divination, mind-reading, illusion, charms
Body		stat; vitality and resilience
Build		tag; descriptive element integral to character
Burn		discard tile to add dice to pool
Call		reveal one tile to add dice to pool
Craft		skill; scholarly creativity or profession
Die Step		rank of die by its facet count, shown as  .
Detail		tag; descriptive element integral to gear
Dogfight		maneuvers in combat conditions, esp. vehicles
Duel		skill; use of one- or two-handed weapons in combat
Dreaming		skill; twisting light into images or camouflage
Drive		skill; cybernetics, power, and abilities
Energy		resource pool; derived from green + yellow tiles
Evade		skill; acrobatics, dodge, streetwise
Fast Crit		injury tag; disappears after application
Firearms		skill; use of long-range weapons in combat
Flight		skill; wild aerial maneuvers and travel
Focus		stat; concentration and willpower
Forge		skill; conjuration, elemental forces, shields
Freebie		dice bought using Energy
Gear		tile; equipment, armor, weapons, spells, tools, etc.
Guile		skill; trickery, traps, insight, savvy
Gunner		skill; use of ship-based armaments in combat
Hardsuit		skill; use of powered armors and body vehicles
Heal		skill; medical skills, empathy
Health		resource pool; derived from red + orange tiles
Id		stat: chaos and destruction (casters only)
Initiative		control of the stage during combat
Instinct		skill; strange perceptions or senses
Kinesis		skill; shaping matter and spacetime

Knuckles		skill; bare-handed martial arts
Lore		skill; general and regional knowledge
Menace		skill; intimidation, taunt, manipulation
Mind		stat; intellect and knowledge
Mosaic		collection of tiles representing your character
Move		part of turn; character relocates
Navigate		zero-G piloting, astronavigation
Network		net-running and mind-body splits
Pace		part of turn; basic 3-m step
Presence		skill; charm, wisdom, appearance, and etiquette
Psinger		use of psiloc for contact with Ancal tech
Qi		stat; order and complexity (casters only)
Reason		skill; perception, analysis, investigation
Reflex		resource; derived from blue + purple tiles
Run		part of turn; combines Move + Action to go further
Sense		skill; scanners and logic circuits
Shape		skill; wild fury and combat forms
Shout		part of turn; short verbal interaction
Skill		tile; reflects knowledge
Soul		stat; fellowship and empathy
Speed		stat; quickness and alertness
Stealth		skill; sneaking, skullduggery, hiding
Sticky Crit		tag; persistent injury, remains until healed
Story		type of tile; details background and heritage
Tile		part of mosaic; carries dice, colors, and tags
Tinker		skill; repair and operation of tools and vehicles
Tools		skill; specialized cybernetic implants
Trait		tile; defines character personality
Turn		segment of combat
Twist		skill; repair, throws, healing, movement
Vibro		melee energy weapons
Walk		part of turn; feet per round traveled, equal to Reflex
Wiles		skill; willpower, negotiation, barter & haggle
Xenology		personal experience with space and aliens
Zappers		ranged energy weapons
